

Hangouts

Tasks for Dominating

NOTICE: Your school district's IT department may have disabled Hangouts for your Google Apps Domain. If this is the cause, you will find that you are unable to complete this task. Please find a group that is able to complete this task and ask to follow along with them. Otherwise feel free to view [Google's official Hangouts training website](#).

Step 1: Find two partners that are able to access Hangouts. To tell if you can access Hangouts, go to [Hangouts](#) and try to sign in. If you can sign in, you have access, if you receive a prompt/error message you do not have access to Hangouts.

Step 2: From [Hangouts](#), attempt to Video Call each member of your group by entering in their email address. Please note that Chrome will ask for access to your Camera and Mic. Only call one member at a time. You may need to allow calls to be made outside of your school domain. Hangouts will prompt you to do so, otherwise use the dropdown on the screen. Once the group member is in the call, try to add the additional group member using the invite button. It is recommended that only one group member creates a video call at a time, so take turns.

Step 3: Video calls can also be initiated in Gmail. Go to [Gmail](#) and look for the chat button in the bottom left corner. Invite one or more groups members at a time by entering in their email addresses. Once each group member has attempted to initiate a Hangout in Gmail, move on to the next step.

Step 4: Hangout videos can be made as scheduled events using Google Calendars. Go to [Calendars](#) and create an event. Edit the invite and add a Video Call. Invite each group member to the invite and then go into the Hangout.

Step 5: This step is just for fun. If you have a Android phone or iPhone you can download the Hangouts app. Download the appropriate app, [Android/iPhone](#), and try to send a message or initiate a video call.
