

# CodeRams Team Competition

Thanks for showing interest in the CodeRams team competition! The competition will consist of 20-25 problems of varying difficulty, which your team will have 2.5 hours to solve.

Your team will be allowed to start the competition anytime between July 25 and July 27, but once you start, you'll have only 2.5 hours to compete.

We'll be using Codeforces for the competition, which automatically judges submissions to problems. Details on how to solve and submit these types of problems are found in our competition guide: [Java Version](#) and [Python Version](#). You can submit solutions in many different coding languages, including Python, Java, and C++.

Before participating in the competition, you should make a Codeforces account at [this link](#).

Once you have a Codeforces account, you can access our example problems by going [here](#), and then going to [this link](#) to view the problems.

We'll also have a practice competition with some more practice problems, which will start on July 18, and last for a week.

If you haven't already, you should find up to two other people to be your teammates, and decide how you're going to communicate during the competition.

You should also join the team competition discord server: <https://discord.gg/GJKDak2>
