

**Warren Township Public School District
Curriculum**

Subject: Reach/Innovation & Design	Grade: 1	Unit: Solving Problems
Total Number of Lessons: 10	Unit Time Frame: One marking period (10 six-day cycles)	
Instructional Materials (Include specific text or digital resource links that are used by teachers and students within the unit):		
Reach Manual - Innovation & Design - First Grade, Reach Engineering Kit - Solving Problems, legoeducation.com Spike Essential Lesson Website		
Goals	Skills / Understandings	
<ul style="list-style-type: none">● Students engage in brainstorming, investigation, sketching, and collaboration prior to building their products.● Students test their products and use test data to inform redesign.● Computer software can enhance the performance of mechanical devices.	<ul style="list-style-type: none">● Engineers build products that solve problems.● Science knowledge can be used to create effective designs.● Engineers research and collaborate during the design process.● Test results can be measured and used to determine if success criteria are met.● Motors add movement to models.● Complex 3D models can be constructed using step-by-step 2D pictorial instructions.● Processes can be represented by algorithms and duplicated to perform a defined task.	
<u>NI Student Learning Standards and Descriptors:</u>		
<ul style="list-style-type: none">● 1-LS1-1: Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.● K-2-ETS1-1: Ask questions, make observations, and gather information about a situation people want to change (e.g., climate change) to define a simple problem that can be solved through the development of a new or improved object or tool.● K-2-ETS1-2: Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.● K-2-ETS1-3: Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.		

Unit Essential Questions:	Student Vocabulary:	Lesson Learning Statement::
<ul style="list-style-type: none"> • How can I use science knowledge to design solutions? • What elements must be in a model? • Why must everyone test under the same conditions? • How do I know if a model is good? • Why might engineers make different designs? • How do motors and computer software enhance the performance of a model? 	<ul style="list-style-type: none"> • test environment • sketch • engineer's journal • model • Constraints • Inspiration • Zipline • Harness • Compare • protective padding • design • test plan • Evaluate • Trials • Products • building materials • algorithm • Program • Debug • success criteria • Motor 	<ul style="list-style-type: none"> • Engineers design solutions to real-world problems by making products. • Engineers select building materials to meet specific goals. • Engineers create several designs, are able to explain their designs, and can describe why they made those choices. • Engineers build and test what they design. • Engineers evaluate their products based on how well they match the success criteria. • Engineers use measurements to decide which design is best. • Motors enhance a product's performance. I can use computer software to control a motor. • Software can interact with a model to make the model do something.

Interdisciplinary Connections (include standard number and activity examples):	Assessment Strategies / Resources:	Benchmark Assessments / Products: Specific common assessments both formative and summative (provide a link to the assessments)
<p>Cause and effect - simple tests can be designed to gather evidence to support or refute student ideas about causes. (1-PS4-1), (1-PS4-2), (1-PS4-3).</p> <p>Influence of Engineering, Technology, and Science, on Society and the Natural World: People depend on various technologies in their lives; human life would be very different without technology. (1-PS4-4)</p> <p>SL.1.1 - Participate in collaborative conversations with diverse partners about grade 1 topics and texts with peers and adults in small and larger groups. (1-PS4-1), (1-PS4-2), (1-PS4-3)</p> <p>Influence of Engineering, Technology, and Science on Society and the Natural World - People depend on various technologies in their lives; human life would be very different without technology. (1-ESS3-2)</p> <p>ETS1.A: Defining and Delimiting Engineering Problems:</p> <ul style="list-style-type: none"> • A situation that people want to change or create can be approached as a problem to be solved through engineering. (K-2-ETS1-1) • Ask questions, make observations, and gather information about a situation people want to change (e.g. “climate change”) to define a simple problem that can be solved through the development of a new or improved object or tool. • Before beginning to design a solution, it is important to clearly understand the problem. (K-2-ETS1-1) 	<p>Checklists Models Sketches</p>	<p>End of unit assessment</p>

<p>ETS1.B: Developing Possible Solutions:</p> <ul style="list-style-type: none"> • Designs can be conveyed through sketches, drawings, or physical models. These representations are useful in communicating ideas for a problem's solutions, such as climate change, to other people. (K-2-ETS1-2) <p>ETS1.C: Optimizing the Design Solution:</p> <ul style="list-style-type: none"> • Because there is always more than one possible solution to a problem, it is useful to compare and test designs (K-2-ETS1-3) <p>Structure and Function:</p> <ul style="list-style-type: none"> • The shape and stability of structures of natural and designed objects are related to their function(s). (K-2-ETS1-2) 		
21st Century Life and Careers - Technology (link to standard 8.1 and 8.2) / Career and 21st Century Skills (link to standard 9.1, 9.2, 9.2) (Include standard number and activity examples from each area):		
<ul style="list-style-type: none"> • 8.1.2.CS.1: Select and operate computing devices that perform a variety of tasks accurately and quickly based on user needs and preferences. • 8.1.2.IC.1: Compare how individuals live and work before and after the implementation of new computing technology. • 8.1.2.DA.2: Store, copy, search, retrieve, modify, and delete data using a computing device. • 8.1.2.AP.1: Model daily processes by creating and following algorithms to complete tasks. • 8.1.2.AP.4: Break down a task into a sequence of steps. • 8.1.2.AP.5: Describe a program's sequence of events, goals, and expected outcomes. • 8.1.5.CS.1: Model how computing devices connect to other components to form a system. • 8.1.5.CS.3: Identify potential solutions for simple hardware and software problems using common troubleshooting strategies. • 9.4.2.CI.1: Demonstrate openness to new ideas and perspectives. • 9.4.2.CI.2: Demonstrate originality and inventiveness in work. • 9.4.2.CT.1: Gather information about an issue, such as climate change, and collaboratively brainstorm ways to solve the problem. • 9.4.2.CT.2: Identify possible approaches and resources to execute a plan. • 9.4.2.GCA.1: Articulate the role of culture in everyday life by describing one's own culture and comparing it to the cultures of other individuals. • 9.4.2.TL.7: Describe the benefits of collaborating with others to complete digital tasks or develop digital artifacts.
