

Example n°1

It's the story of a girl who posted a photo on Instagram.

Some pupils of her class and her school started to insult her. To stop the cyber bullying she talked with her mother. Her mother talked with the director of the school and the children stopped the cyber bullying.

It's important to make children and adults aware of risks and consequences of cyber bullying. We should talk more about that at school.

Example n°2

It's a true story about a 14-year-old girl who suffered cyberbullying.

She met someone on Discord (social network). She was making friends with this boy but she thought he was 16 years old. One day she couldn't connect anymore to her account so she decided to give her codes to this man. He changed her codes and usurped her identity to send hateful messages to her friends. He also intimidated her to come to her house if she talked about it. But all the same the girl decided to tell her parents. They reported to the police a complaint. After that, the man was found .

To avoid this maybe the social network needs to do campaigns focusing on prevention to remind the young people to not give their codes.

The social network maybe can create a message of warning which would come out every hour.

Example n°3

The story of Samuel Paty :

In France, on 16 October 2020, Samuel Paty, a history teacher , was assassinated . Ten days before, the teacher taught the caricature of Mahomet in his class but the students were shocked. The parents have encouraged to the hatred on social media. The next day, Samuel Paty was assassinated in front of a high school during an Islamist terrorist attack.

To avoid this terrible event, we mustn't encourage to the hatred and not pass on.

Example n°4

Fake news about covid

On Twitter, the teacher Dider Raoult declared that the treatment by hydroxychloroquine can treat Covid-19, then the fake new was spread by the French media. People started to buy this medicine, but it isn't efficient, even dangerous and it can provoke cardiac arrest.

The solution is to check your source, and compare the information, cross reference.
