

Science fair reflection

This is what we did for our science experiment. What is the most environmentally friendly way to clean carpet?

To test this experiment we got three types of carpet and cut them into squares. We stained the carpet with coffee and raspberry cordial.

Then we lined the carpets up with the products which we had chosen to get the stain out.

These products were salt, baking powder, jaes carpet cleaner, soap, vinegar and a citrus base cleaner. We left the stain on the carpet for ten minutes and then dabbed the cleaning product on the stain.

My strengths were completing the science experiment and working together as a team. My weakness was finding an experiment to do.

Our project went well because we found what carpet cleaner works the best.

Next time I do a science experiment I would use more photos and more graphs.

overall I thought we did a great job.

By Georgie

I think I did OK with my experiment, my results were quite clear and my presentation was alright.

By Abby

Science Fair Reflection:

I think Brydie and I did a good job with our science fair. Although the experiment had been done before, I think we worked well together and the final product was good. Next time I think we should focus more on how original our experiment was. I was proud of the presentation and enjoyed putting it all together.

By Scarlett :)

Science Fair:

I think that my experiment went good but it took me awhile to think of an idea to do . I was happy with the result of my test but if I had more time I would of put a bit more colour, information and maybe some more graphs/pictures on my board. I liked working by myself because I could do it bit

by bit. Overall I am happy with what I did.

By Megan

Science fair!!!

I think that my science experiment went bad because my grass died my experiment seemed like it was which grass dies the quickest instead of which grass grows the best. I think my science fair looks alright and the information was alright as well. Overall I did alright I think.

by Morgen!!! :)

Science Fair

I think my topic of my science project was a good one. Next time I think that I will do more data. I am happy with the result of my science project.

by Jonathan.

I honestly think that we could of chosen a a better and more interesting

topic but overall we did a really good presentation and we had lots of information to give the reader.

By Olivia.k

I think i did quite well, on my graphs especially. I think i could of done a bit better with the log book as mine was typed not hand written.

Overall i thought it was a well done science fair experiment.

By Tom.T

Science Fair

I think the topic that I choose was a good one because it can help the environment. I think next time I could improve on looking more into my investigation and if I had more time I would put more stuff on my board.

But over all I think I did a good job.

By Clare

RECYCLING

I THINK THAT I DID QUITE WELL BUT I COULD OF DONE BETTER. I THINK WHAT I DIDN'T DO VERY WELL IS THAT I LEFT MY CHOICE OF PROJECT TO LATE. I THINK I DID QUITE WELL, THOUGH NEXT TIME I am GOING TO DO MY WRITING BIGGER and more neat Presentation. I ALSO THINK I COULD HAVE GIVEN MORE INFORMATION.

BY GRACE

which colour absorbs the most heat ?

whilst Mary and I were doing the experiment we had a problem with the thermometer. Because we used a human thermometer it didn't work but then we got a new thermometer which was a water thermometer. The good thing was that we got some jars that we could put the water in and we got a good result

By Rachel

My Science Fair investigation went fairly successfully. The final experiment was different to the first plan, which was to measure the smoke's pollution content by just using a funnel. The smoke didn't travel through the filter cloth though, so my dad and I developed the Nunu to suck up the smoke. Everything else went smoothly and accordingly.
