ABSTRACT

All information about the formatting requirements is contained in this document. Please review it carefully. You may use the document as a template and copy/paste your paper content here – this is probably the easiest option. Several styles have been included in this template to facilitate formatting – you may find it easier to use them instead of formatting each segment differently. Note that it is important to adhere to the requirements exactly, as this will form the camera-ready version that will be used to produce the Proceedings. The limitations on the length of the document are as follows. The word length is not more than 300 words, written in English.

INTRODUCTION

The introduction contains the purpose of the study and why you are conducting the study. The main section of an article should start with an introductory section which provides more details about the paper's purposes, motivation, research methods and findings. The introduction should be relatively nontechnical, yet clear enough for an informed reader to understand the manuscript's contribution.

It is essential to maintain a coherent and academic writing style. Avoid using subheadings within the introduction to ensure it remains a cohesive section. Use the APA 7th citation style, such as. Ensure that the manuscript format employs *Cambria* font, 12pt size, with justified text alignment.

METHODS

The methodology section should provide a clear and detailed description of the research design and approach used in the study. Authors should specify whether the study is qualitative, quantitative, or mixed-methods and outline the type of research, such as a case study, experimental design, or survey. The tools and techniques used for data collection should be described, including interviews, surveys, content analysis, or observational studies, with an explanation of how these align with the study's objectives and research questions.

The characteristics of the participants and the sampling method used should be detailed, including the sample size and relevant demographic information. The methods employed for data analysis should be specified, mentioning any statistical tools or coding strategies used, as well as software like SPSS or NVivo, with a justification for their suitability for the research questions. Ethical considerations must be detailed, including informed consent, data privacy, and participant confidentiality. Authors should also note any ethical approval obtained from relevant institutions if applicable. Finally, limitations in the methodology that could impact the findings or the generalizability of the results should be acknowledged.

The methodology should be presented clearly and systematically to ensure reproducibility by other researchers. This section should be written using *Cambria* font, 12pt size, with justified text alignment and adhere to the IEEE citation style where applicable.

RESULT AND DISCUSSION

The results and discussion section should present the findings in a clear and logical manner, using tables and figures where appropriate to support the narrative. The results must be reported objectively, highlighting key data points and trends that address the research questions. Each result should be clearly linked to the corresponding research objectives and supported by relevant data.

The results and discussion section presents the findings of the study in a structured, logical, and coherent narrative. Authors should report the findings objectively, using descriptive or inferential statistics, thematic categorizations, or other analytic outputs depending on the research design. Tables, figures, and charts should be employed where necessary to enhance the clarity of the findings and to highlight critical patterns or trends. Each major result must be linked explicitly to the research questions or objectives stated in the introduction. Following the presentation of data, authors should engage in a critical discussion of the findings, interpreting them in light of existing literature and theoretical frameworks. This comparative analysis should address similarities and differences with prior studies and explain possible reasons for such outcomes. Moreover, the discussion should reflect on the broader implications of the findings for theory, practice, policy, or future technological developments in language and social media contexts. Unexpected or contradictory results must also be addressed thoughtfully, with plausible interpretations or methodological reflections. Throughout the discussion, citations must be used strategically to support claims and demonstrate scholarly engagement. The narrative should flow smoothly from one theme to another, maintaining academic rigor and clarity.

Discussion

In the discussion, interpret the findings by relating them to the existing body of literature. Emphasize how the results contribute to the understanding of the interaction between language, technology, and social media, and discuss any similarities or differences compared to previous studies. Address the implications of these findings for theory and practice, as well as any limitations that may affect the interpretation or generalizability of the results.

It is important to integrate citations in the discussion to substantiate claims and provide context. Authors should also propose potential future research directions based on the current study's findings. Ensure that the section is cohesive and flows logically from one point to the next, maintaining an academic tone throughout.

CONCLUSION

The conclusion serves to distill the essence of the study by highlighting its main findings without simply restating statistical results. Authors should succinctly reflect on how the study contributes to the understanding of the intersections between language, technology, and social media, especially in relation to the research questions. This section should also articulate the practical and theoretical implications of the study, showing how the results can inform educational practice, platform design, policy development, or future academic inquiry. Importantly, the conclusion should point toward future research directions that emerge logically from the study's outcomes and limitations. It must be written in a reflective and conclusive tone, avoiding the introduction of new data, arguments, or references.

LIMITATIONS

This section provides a critical reflection on the study's constraints, helping readers assess the scope and boundaries of the findings. Limitations may arise from methodological issues such as sample size, data collection instruments, or context-specific variables that restrict the generalizability of the results. Authors should also acknowledge temporal and technological limitations, particularly when studying evolving platforms such as social media or emerging AI-based tools. Self-reported data, for example, may be subject to bias or misinterpretation, while digital analytics might be influenced by algorithmic changes beyond the researchers' control. Rather than undermining the study, a well-articulated limitations section reinforces the integrity of the research process. Authors are encouraged to suggest how future research can address these limitations by adopting alternative methods, expanding populations, or exploring comparative studies in other contexts.

AUTHOR CONTRIBUTION

The Author Contributions Statement can be up to several sentences long and should briefly describe the tasks of individual authors. Please list only 2 initials for each author, without full stops, but separated by commas (e.g. JC, JS). In the case of two authors with the same initials, please use their middle initial to differentiate between them (e.g. REW,

RSW). The Author Contributions Statement should be included at the end of the manuscript before the References.

CONFLICT OF INTEREST

The authors declare no conflict of interest.

DECLARATION OF USE OF AI IN SCIENTIFIC WRITING

The author(s) used [NAME TOOL/SERVICE] during the preparation of this work to [REASON]. After utilizing the tool/service, the author(s) thoroughly reviewed and edited the content as necessary and assumed full responsibility for the publication's content.

REFERENCES

Reference should be written according to the format of reference. Articles are required to use reference management (Mendeley, Zotero, Endnote) with style APA 7th edition. Unpublished reference is not suggested to be cited in the article.
