Creating Audio File and QR Code with Vocaroo

Step 1: Create Google Doc titled: (Your Name- QR code)

- This will be where you put the image of your QR code, and the link that you receive after you recorded yourself
- Keep this doc open throughout the process.

Step 2: Recording Audio

- Go to vocaroo. When I did this
- Click “record”
- It will ask you to allow access to your microphone and camera. Click “allow”. (A pop up may appear at the top of your screen, click “allow” there as well)
- **When you click “allow” it will begin recording.** Don’t panic, you can always start over.
- Record your audio story
- Once you are “happy with your recording” click “here to save”
- You will see a box with lots sharing options. There you will see the URL link.
- IMMEDIATELY copy this link and paste it into your google doc
- In the lower right hand corner of the box, click “QR code”
- This will open a new window with an image of your QR code that is linked to your audio
- IMMEDIATELY copy and paste the QR code image into your google doc.

Step 3: Share Google Doc with Holly HERE

Helpful Hints:

- If you leave the Vocaroo page, you can't get back to your recording without the link. Make sure you copy and past both the URL link and QR code that were created on the site.
- Don't worry about messing up the recording the first time. It may take a few tries.
