

## How to Zoom in on your neighborhood in Dave's Redistricting App

- To Zoom in, use the 'zoom in' tool (a little + icon) in the upper left of the map. You can also use the scroller on your mouse or trackpad. Either works well.
- To manage where you zoom in, you can use the 'Pan' tool (the hand icon directly above the zoom in icon). Alternatively, just click and grab if the hand icon is already showing.
- Click on the plus icon a few times, then use the hand icon to move to where you want to be. Repeat until you are at your desired location.

## More Tips to See the Map Clearly

- Expand the options under the “Colors” menu on the left.
- Turn the **Partisan Lean** on and off by checking and unchecking the **Partisan Lean** box under the **Colors** tab on the left hand side of the map.
- Turn on the **Map Colors** box (if you so choose) to give each district a different color.
- Still under the “Colors” menu, reduce the **Opacity** by sliding the button to the left. Reducing opacity almost to zero allows you to see roads and other map features through the map colors.
- In the “Overlays” menu, click **Background Map**. You may also want to check **District Lines**, **County Lines**, **Labels**, and **Landmarks** to get more information on your map!
- When zoomed in, you should now be able to see city and street names.
- To see actual **city boundaries**, just need to click to turn on the **City Lines** box. However, City Lines make the map a bit cluttered, so you may prefer to leave this box unchecked.
