Solve the equation.

1. $3x + 5 = -13$

2. $-y + 6 = 11$

3. $0 = 4t + 72$

4. $\frac{w}{7} - 12 = -1$

5. You have \$15 to spend at the arcade. If you plan to spend \$3 on snacks, and games cost \$2 each, how many games can you play?
