

Planet Presentation-

You will present to the class your expert findings as a group on your planet. There is not a minimum or maximum number of slides. Your job is to entertain the class and make them amazed by the information you present on your planet.

Really focus on pictures that are available for your planet as well as past and current NASA missions to this planet. (Io, Ganymede, Callisto, Europa)

The following list shows possible things you could include in your presentation that might be helpful. You don't need to do every one, and you may end up doing ones not on here.

Could we survive temperatures here?

Have we landed anything here?

What pictures do we have of this place (NASA's site is a great place to look)?

Any future missions?

Any weird things?

Any moons that are habitable?

Any moons that have weird things?

Any natural resources that we'd be interested in here?

Any bizarre weather?

Gravity?

Magnetic Field?

Weird things about its rotation or revolution?

What would happen if you tried landing here?

Radiation Levels?
