

Senior UI UX Designer

Location: Remote

About the Role

We are looking for an experienced Senior UI/UX Designer to join our team on a fully remote basis. You will take ownership of the end-to-end design process for our web products — from research and wireframes to high-fidelity interfaces and design systems — working closely with product managers, engineers, and leadership to ship experiences that are both beautiful and effective.

Key Responsibilities;

- Lead end-to-end UI/UX design for web products, from concept through final visual design and handoff.
- Conduct user research, usability testing, and translate insights into actionable design decisions.
- Create wireframes, prototypes, user flows, and high-fidelity mockups for web applications.
- Build and maintain a scalable design system / component library for consistent product experience.
- Collaborate closely with Product Managers and Engineers to ensure design feasibility and pixel-accurate implementation.
- Own the visual and interaction design language across the product, ensuring consistency and accessibility.
- Present design concepts and rationale clearly to stakeholders and incorporate feedback effectively.
- Mentor junior designers and help establish best practices for the design function.
- Stay current with UX trends, tools, and web design/development capabilities and constraints.

Requirements;

- 5+ years of professional experience in UI/UX design, with a strong focus on web products.
- A strong portfolio demonstrating end-to-end design work on live web applications or platforms.
- Expertise in design tools such as Figma (preferred), Sketch, or Adobe XD.
- Solid understanding of responsive design, accessibility standards (WCAG), and modern web design patterns.
- Experience building and maintaining design systems / component libraries.
- Working knowledge of HTML/CSS fundamentals and how they impact design implementation (no coding required).
- Strong communication skills and comfort presenting and defending design decisions.
- Proven ability to work independently and manage priorities in a fully remote, asynchronous environment.
- Experience conducting or collaborating on user research and usability testing.

Nice to Have;

- Prior experience designing for **SaaS, EdTech, or consumer web platforms**.
- Familiarity with front-end frameworks (React/Vue) to better collaborate with engineering.
- Experience with motion/interaction design and prototyping tools (e.g., Framer, Principle).
- Experience working with distributed, cross-time-zone teams.

What We Offer

- Fully remote role — work from anywhere.
- Ownership of design direction for a growing web product.
- A collaborative, fast-moving team environment with real impact on product decisions.
- Flexible working hours with an emphasis on outcomes over hours logged.

How to Apply

Interested candidates should submit an updated resume along with a portfolio link showcasing relevant web product design work. yinmin.mic@gmail.com
