

Navigation and Coga -panel

Members: Lisa, David, John K, John R, Aaron!

## Introduction

Difficulty with wayfinding by people with cognitive disabilities ranges from minimal to extreme. They may need minimal help to navigate an indoor location, or they may need more help, such as detailed, step-by-step directions. This can have an impact on people with impairments of:

- memory;
- executive function;
- attention;
- perception processing; and/or
- Knowledge.

## Questions

Can you give an example of when things go wrong for you (inside or outside)

How much do you need GPS
