SAU 53 Pembroke Academy Academic Competencies

Pembroke Academy's Academic Competencies are a set of learning expectations developed by teachers with the expectation that students can demonstrate their mastery throughout an academic career at the high school. While the competencies are organized by content area, it should be noted that a student can demonstrate competence outside of the classroom and in classes or grade levels separate from where they are listed. In other words, a tenth grade math competency may be demonstrated by a student in a ninth grade science class or through some real world experience that takes place outside of the school building. Competency Based Education is about a student providing evidence of deep learning over the course of time.

This document is set up so that the reader can look at the progression of skills and concepts over the course of a child's education. The concepts and skills are organized by content area competencies. These are the overarching, big ideas that students must know and be able to do.

The coding next to each competency provides teachers with the ability to easily connect the curriculum to their instruction and assessment. This unique identifier will help ensure that competencies are being taught and assessed. The following example provides insight as to what a code means:

PA.ENG.R.9.1

PA stands for Pembroke Academy
ENG is the content area - English s
R stands for the competency strand - Reading
9 is the grade level
1 shows that this is the first FS competency strand at the particular grade level
