

before you read:

If you don't know, all you need to do is just copy the codes you want to use, go to your myspace profile and click "Edit your profile" then scroll down, there should be a box that is titled "CSS", you just paste the codes in the box!

other info:

- Always put the "body{" code at the very top.
- Most of these codes require "html color codes" to basically color things. For example: #fff (#fff is the color white) I recommend this website for finding html codes!:
<https://htmlcolorcodes.com/>
- Just copy the color code with a hashtag at the front and paste it in the code where it says "change this TEXT with html color code"
- And always remember to put the semicolon at the end of each code or it wont work!! Ex: background: url(link);
- Always stack the codes on top of each other. Example:
Body{
Background: url();
}
.blurbs{
Background: purple;
}

basic codes!

background color:

```
body{  
background: (change this TEXT with html color code);  
}
```

background image:

```
body{  
background: url(change this TEXT with image/gif link);  
}
```

If you want your image to cover the page then use:

```
body{
background: url(change this TEXT with your link);
background-size: cover;
background-repeat: no-repeat;
}
```

about me background color:

```
.blurbs{
background: change this TEXT with html color code;
}
```

contacting info box color (send message/add friend/report /block):

```
.boxInfo{
background: change this TEXT with html color code;
}
```

picture/gif on the bottom right of the screen:

```
.url {
font-size: 0px;
background: url(change this TEXT with image/gif link);
background-size: 310px;
position: fixed;
right: 0;
bottom: 0;
color: transparent !important;
height: 310px;
width: 300px;
border: none;
box-shadow: none;
padding: 0 !important;
z-index: 1000;
}
```

If you want to add a font to your page you can use:

```
body{
background: url(link);
font-family: (change this TEXT to your desired font!);
}
```

I recommend this website for finding fonts!:

<https://developer.mozilla.org/en-us/docs/Web/CSS/font-family>

custom cursor:

```
cursor: url(your link), auto !important;
```

[put the code above under the “body{“ code!] example:

```
body{  
background: url(link);  
cursor: url(your image/gif link), auto !important;
```

I'm not good at explaining but I hope this helped a little! If you need help with anything else, just message me! :D
