

Multiverse of Madness Hero America Chavez Will Be a Staple in the MCU

By: Tim Burke

A cool aspect of Dr. Strange's Multiverse of Madness is that it served as more than just a Dr. Strange movie. It also served as an origin story movie for America Chavez aka Ms. America. Chavez, played by Xochitl Gomez is a super being from another universe who has the ability to travel through the multiverse. As far as we know, she is the only being in the Marvel Cinematic Universe who is capable of that. Very little is known about America Chavez's MCU future but I assume she will play a huge role in the global phenomenon moving forward. Especially given her ability to transport through the multiverse and the fact Marvel's next phase of storytelling appears to be centering around the Multiverse.

Chavez was certainly the hero of this movie. Throughout the film, Strange guided her to control her powers and become the hero she was meant to be and will be in the MCU. She also helped Strange in his heroic journey of becoming less of a control freak and a supportive friend and hero. The result, not only made Steven Strange a better superhero but a better man. The relationship between Strange and Chavez reminded me of a sort of mentorship and friendship between Peter Parker and Tony Stark in Phase Three of the MCU.

I greatly enjoyed the character of America Chavez and hopefully we see her in more MCU adventures soon!
