

Hi, My name is Amanda Byrd and I am the Chief Storyteller for the Alaska Center for Energy and Power located at the University of Alaska Fairbanks.

I share ACEP and Alaska's energy stories through newsletters, articles and videos.

One of the stories I tell is about the community of Kongiganak on Alaska's Yukon Kuskokwim Delta. We felt it was important showcase their incredible remote microgrid and wind turbines, and how local residents were trained to become wind turbine technicians.

Telling stories about communities like Kongiganak gives people the ability to understand some of the food and energy security challenges of remote communities and to share some of their successes!

So, in a nutshell, I tell stories about ACEP and Alaska's energy projects to help share the knowledge of Alaska's ingenuity.
