

It is important to plan for the future

Future is uncertain. No one could tell about future. But we could at least something for betterment of our future. We are facing various kind of problems. So it's high time to plan for our, world, nation's future. Yes I know, there had been plan for present, some were successful and some were failed.

Now come to the point, why some planning is unsuccessful, what steps we should to take immediately. I am Noorjahan Binte, now reading in Brac University 7th Semester Computer Science & Engineering. I am pointing a few problems in our country in Bangladesh Rising commodity prices. Inflation must be reduced, production rate should be increased as per demand.

Traffic jam is really killing me everyday, every human are facing this. I am a student, it took almost 2 hours to reach in my University. That means total 4 hours in a day only in road. Everyone's case is same. Flyover 2-3 layers all over the road, Metro rail line, rickshaw should be removed.

Unemployment is also o biggest problem. Theft, robbery, injustice, extortion and intoxication are increasing due to unemployment. Technical education is needed for the future. All the students in the mean time of education could work in different field to gain experience and could work. In future they could be a Entrepreneur.

For me, may be we need one more planet to live in future, AI based robot to make our life easy. .
