ALL MY DIGITAL PRODUCTS 🔥 (Grow on TikTok 10x Faster):

<https://beacons.ai/entrepreneurai>

1. To Generate Channel Names:

Act as a branding expert. Generate a list of 10 professional and intriguing channel name ideas for a YouTube/TikTok channel. The channel's content will be AI-generated mini-documentaries on topics like alternate history. The names should be short, memorable, and feel both intelligent and cinematic.

2. To Generate Profile Picture Concepts:

Act as a brand designer. Brainstorm 3 distinct visual concepts for a profile picture logo. The channel is about exploring historical what-if scenarios and lost knowledge. The logo should be minimalist, modern, and represent the idea of 'looking into the past'.

3. To Generate the Final Profile Picture Image: *(This example assumes you chose a concept about a magnifying glass and a scroll.)*

That's perfect. Now, using your DALL-E capabilities, generate an actual profile picture image based on that concept. Create a minimalist, modern vector logo of a single, elegant magnifying glass positioned over an ancient, unfurled scroll. The background must be a solid, dark, near-black color to make the logo pop.

4. To Generate Viral Video Ideas:

Act as a viral video concept creator for TikTok. Generate a list of 10 compelling “art of war” documentary ideas. The ideas should be high-concept, thought-provoking, and suitable for a short, 1-2 minute cinematic video.

5. To Generate the Documentary Script: *(Replace the bracketed text with your chosen idea.)*

Act as a documentary scriptwriter. Write a short, powerful, 200-word script for a viral TikTok video on the topic of: **[What if the Library of Alexandria never burned?]** The script should have a strong, intriguing hook, present 2-3 key consequences or ideas, and end with a powerful concluding statement.

6. To Generate Cinematic Scene Prompts (Storyboard): *(Paste the script you generated in the previous step into this prompt.)*

Act as a film director and expert prompt engineer. Take the following documentary script and break it down into 10 cinematic scene prompts for an AI image generator. For each of the 10 scenes, you must provide a detailed, visually rich description that captures the essence of that part of the script. Each scene description must include:

1. The Camera Shot (e.g., WIDE SHOT, EXTREME CLOSE-UP)
2. The Subject & Action (e.g., A scholar reads a scroll, ancient machines are being built)
3. The Lighting & Environment (e.g., Candlelit library, bustling advanced Roman city)
4. The Mood & Emotion (e.g., A feeling of wonder, technological progress)

Here is the script: "[Paste your 200-word documentary script here]"

7. To Generate Animation Prompts for Kling.ai: *(Use this after you have your 10 scene prompts from the step above.)*

Act as a professional animator. I have a 10-scene storyboard. For each of the 10 scenes described below, write a short, clear motion prompt suitable for an AI video animation tool like Kling.ai. The prompts should describe simple, cinematic movements like camera pans, zooms, and subtle environmental effects that match the mood of each scene.

Here is the storyboard: "[Paste your 10 scene prompts generated in the previous step here]"
