

About Detected

[Detected](#) is a London-based fintech that provides frictionless global business onboarding. Detected, which was founded in July 2020, uses a unique algorithm which utilises over 1,700 data sources to create a detailed and accurate profile of any business in the world. It supplements this with information that can be added by the business that is being onboarded. In doing so, Detected enables a frictionless, almost instant, onboarding process. Since its founding, Detected has raised a total of £6 million.
