JustDumbMemes (JDM) Litepaper v1.0

1. Executive Summary

1.1 The Genesis: Turning Hard Lessons into Guardrails

The digital asset landscape is a double-edged sword. While it offers unprecedented financial sovereignty, it is simultaneously a minefield of hijacked wallets, stolen funds, toxic influencer hype, and fly-by-night scam coins. For eight years, the founder of JustDumbMemes (JDM) LLC navigated these exact trenches—learning the hard way, falling for the sophisticated traps of bad actors, and discovering firsthand that the crypto space severely lacks a centralized, universally accessible safety net.

Initially launched in May of 2025, JDM was born to destroy the barriers that hide investor protection behind premium paywalls. By Q4 of 2025, the team recognized the need for a deeper, more robust experience. The decision was made to evolve JDM into a fully interactive space—a place where the public could explore genuine assets on the Stellar ecosystem, find trusted communities, and connect directly with vetted developers and creators. We are establishing a permanent, completely free, and radically transparent "go-to" hub where the public can access immediate educational guardrails and actionable tools to truly Do Your Own Research (DYOR).

1.2 Dual-Sided Ecosystem: Empowering Investors and Elevating Creators

JDM recognizes that a healthy ecosystem requires protecting the buyer *and* supporting the builder. The Stellar network is home to incredible engineering and dedicated developers, yet legitimate Stellar projects are frequently buried under the multi-billion-dollar marketing hype of alternative blockchains.

Building a reputable, compliant project is a grueling, expensive endeavor. JDM solves this exposure crisis by serving as a high-visibility, low-to-no-cost showcase and promotional hub specifically for verified Stellar ecosystem creators. By lowering the financial barrier to marketing and exposure, we give elite, hardworking developers a transparent stage to shine, connecting them directly with a community of educated, high-conviction investors who value long-term trust over short-term hype.

2. The JDM Platform (justdumbmemes.com)

The flagship interface, launching its comprehensive interactive upgrade on **July 1, 2026**, serves as a dual-purpose portal. It operates as an impenetrable educational firewall for investors and a premium, high-visibility showcase for legitimate builders.

Rather than relying on algorithmic aggregators that can be easily gamed by wash trading, the JDM platform utilizes a strict, multi-point manual and technical verification process to curate its database.

2.1 The JDM Verification Blueprint

To earn a featured position, a badge of authenticity, or promotional placement on the JDM platform, an asset and its creators must survive a comprehensive evaluation framework. This framework targets the structural and behavioral markers of long-term viability:

Vetting Pillar	Strict Requirement	Threat Mitigated
Asset Age	Minimum 6 months of active history (1+ years preferred)	"Fly-by-night" projects and instantaneous rug pulls.
Liquidity Health	Adequate total liquidity with verified **locked** liquidity	Sudden liquidity drains ("developer exits").

Supply Distribution	Strict cap on top holder supply percentages	Massive whale dumps and coordinated market manipulation.
Network Standing	Minimum Stellar DEX Score of **3.0**	Artificially inflated, low-activity, or unverified tokens.
Digital Footprint	Verified domain and current, active social media presences	Abandoned projects, phantom teams, and impersonation scams.

2.2 Core Platform Features

The interactive hub converts these vetting layers into a user-friendly, public-facing interface containing distinct operational chambers:

- **The Curated Asset Directory:** A highly scannable, clean index of Stellar ecosystem tokens that have successfully cleared the JDM verification blueprint. Investors can browse project backstories, verified links, and raw token metrics without having to filter through dangerous, unvetted assets.
- **The Investor Defense Suite (DYOR Tools):** A dedicated, completely free educational library providing real-world walk-throughs on how to identify wallet-hijacking vectors, read Stellar network asset data, verify domain records, and evaluate liquidity health independently.
- **The Verified Creator Arena:** A promotional showcase specifically for developers who have survived the vetting process and have been added to the Asset Directory. Once vetted, creators can opt to prominently feature their roadmaps, ecosystem updates, and community milestones. Access to this premium visibility is unlocked not by paying exorbitant fees, but by securing and locking liquidity pairings with JDM ecosystem assets and Partner assets.
- **Quarterly Notable Projects:** Every quarter, the community votes on a standout vetted project to be highlighted as a "Notable Project." Winning projects receive dedicated articles, widespread social media promotion, YouTube features, and custom highlight items in the JDM Merch Shop.

2.3 The JDM Merch Hub

JDM MERCH

Connecting physical utility to digital culture, the JDM Merch Hub is an integrated storefront featuring high-quality apparel and accessories designed explicitly for the crypto community. The Merch Hub acts as an extension of the JDM brand, allowing community members to proudly represent verified projects in the real world while providing a sustainable, non-tokenized revenue stream to help support platform operations and charitable initiatives.

3. The Ecosystem Tokens

The JDM token ecosystem operates entirely on the high-speed, low-cost Stellar network. Unlike standard memecoins that rely solely on community hype, the JDM multi-asset structure serves as the functional backbone of the platform, cleanly dividing administrative sustainability from community and creator utility.

3.1 JDM Coin (JDMC)

JDMC is the newest asset in the ecosystem, engineered specifically to serve as the structural backbone for the platform's long-term sustainability.

- **Platform Utility:** JDMC serves as the administrative utility engine of the ecosystem. It is used directly to offset the underlying costs of running, hosting, maintaining, and continually updating the interactive infrastructure of the JustDumbMemes web platform.
- **Total Supply:** 25,000,000 JDMC
- **Tokenomics & Distribution:**
    - **50%** — Community Allocation
    - **20%** — Locked in Liquidity
    - **15%** — Rewards & Drops
    - **15%** — Team & Marketing
- **Ecosystem Wallets:**
    - **Issuing Address:** GDZ7MGCU3TH4EVXU6S7EZSCRH6VCL36L4Q436MNVLEEFFVXRLRMHGZX2
    - **Distribution Wallet:** GDBXUUFIYNVGL7V7BATR7DLEPSGBT3REUMKWWCD4P3E6SU7HIFJAQ7UD
    - **Locked Liquidity Wallet:** GDCHKBJFMCKGQHRE2FJ6NNMPK3UHWOGPQIQTQJ3EWHSGJGOVSV644URF *(Exclusive to JDMC locking)*
    - **Team & Marketing:** GDU5APC5RPWCIWJFGZ7OITTY3MSYEOWW7M2UIJZXOGVSDGWJTQIF3LS3G
    - **Rewards Wallet:** GDLI7TQV5OAFNA2WR7CNPKQAD4AJ4L33G3E4JRWQFJ5LIGDDCBRKRQTB

(Note: With the exception of the specific Locked Liquidity Wallet, all JDM ecosystem assets utilize this unified wallet infrastructure for distribution, marketing, and rewards).

3.2 Shut the FUCUPCAKES ($FUCUPCAKES)

The memecoin that started it all. Originally minted on Stellarmint with a starting supply of 1 Billion, aggressive strategic burns have reduced the total supply to just over **97 Million**. More than just a meme, Shut the Fucupcakes represents the philanthropic heart and core creator utility of the JDM community.

- **Platform Utility:** Fucupcakes is the primary key to the **Verified Creator Arena**. Vetted developers who wish to prominently feature their projects on the JDM platform, highlight roadmaps, or promote giveaways must secure and lock up liquidity pairings using Fucupcakes (paired with a Partnered Asset, XLM, or USDC). This creates constant, organic ecosystem velocity while thickening the liquidity pools that stabilize the network.

- **Ecosystem Rewards & Social Integration:** Fucupcakes is fully integrated into the broader Stellar ecosystem's leading reward protocols. It is an official **ACT Tipperbot Asset**, allowing seamless tipping and sharing on Telegram. Furthermore, Fucupcakes is integrated into the **LCS Storm of Value Rewards System** and the **ACTHUB Rewards System**, allowing holders to earn hourly rewards by providing liquidity to partnered ACT, Tread, and LFI tokens.
- **Price Stability Mechanics:** Approximately 50% of the current supply is secured in liquidity across various assets. The remaining 7% in the Distributor Wallet is deployed in incremental sell orders. Once each order sells, the resulting XLM is strategically used to **lift the buy floor**, ensuring price stability and protecting against drastic market dives.
  - *Current Holdings:* 3% remaining in Team & Marketing; 2% remaining in Rewards.
- **The Give Back Fund:** At the beginning of each new year, Fucupcakes enacts the "Give Back Fund" to benefit a charitable organization voted on by the community. In 2026, the fund successfully launched its first major initiative, sending 8,000,000 Fucupcakes (converted to XLM) to support the **OvaryIT Foundation**.

3.3 xASSHAT

xASSHAT represents the resilient, community-first evolution of the original ASSHAT token. Originally minted on the Lumeme platform with an initial supply of 1 Billion tokens, a massive early burn event permanently reduced the max supply to **750 Million**. Following the decommissioning of the Lumeme platform, the JDM ecosystem initiated the migration to xASSHAT to safeguard investor capital and preserve the asset's active liquidity pools.

- **The Migration Protocol:** To ensure complete preservation of value, a seamless **1:1 swap order** structure has been established. Reflecting JDM's commitment to fair-share decentralized trust, there is **no hard deadline** to execute this swap, shielding early supporters from artificial cutoff panics.
- **Core Philosophy & Ecosystem Rewards:** At its heart, xASSHAT is a pure memecoin with the unyielding mission of bringing joy, raw comedy, and a tight-knit sense of community to the Stellar network. Like $FUCUPCAKES, xASSHAT is an officially listed asset in the **ACT Tipperbot Program**. It is also a participating asset in the **LCS Storm of Value Rewards System** and the **ACTHUB Rewards System**, generating hourly yields for users providing liquidity alongside ACT, Tread, and LFI tokens.
- **Ecosystem Wallets & Floor Mechanics:**
  - **Issuing Address:** GD22OPUKBMM3NVEMHTBSEAUL5O7O4MTHXQOXCH5SLQPSGFTIBAP2GKIT
  - **Liquidity Allocation: 40%** is actively deployed and secured across various decentralized liquidity pools to maintain robust trading corridors.
  - **Floor Stabilization Engine: 21%** of the supply is managed within the unified Distributor

Wallet (GDBXUUFIYNVGL7V7BATR7DLEPSGBT3REUMKWWCD4P3E6SU7HIFJAQ7UD) via automated, incremental sell orders. Mirroring the protective framework built for $FUCUPCAKES, as each target sell order is met, the acquired XLM is instantly funneled back to systematically **elevate the token's buy floor**, defending holders against sudden market dips.
  - **Operational Reserves: 13%** is held in the Team & Marketing Wallet, and **2%** is assigned to the Rewards Wallet for community distributions.

3.4 Strategic Alliance Network

The mission to sanitize and educate the Stellar network cannot be achieved in isolation. JDM has formed robust strategic partnerships with foundational Stellar organizations, including **Authentic Payment**, **Liberty Crypto Syndicate (LCS)**, and **Lumenaire**. Working closely together, this coalition pools resources, vetting protocols, and community outreach to build, establish, and aggressively maintain a unified standard of trust for all investors operating on the Stellar network.

4. Operational Roadmap & Long-Term Vision

The primary, high-priority milestone for JDM LLC is the official rollout of the newly interactive, upgraded platform on **July 1, 2026**.
Following this deployment, the long-term vision focuses on the continuous integration of the ecosystem's three core token pillars: using **JDMC** to anchor administrative infrastructure, leveraging **$FUCUPCAKES** to power creator promotion and community philanthropy, and running **xASSHAT** as the foundational cultural asset for community engagement and stable floor growth. Together, these elements position JustDumbMemes as the ultimate protective buffer and promotional showcase on the Stellar DEX.
