

*Please be informed that the camera will automatically support multiple languages upon upgrading to the latest firmware.

Step 1: Download and install the Insta360 app

- iOS/Android: <https://www.insta360.com/download/insta360-go3>

Step 2: Mobile app connection via WiFi

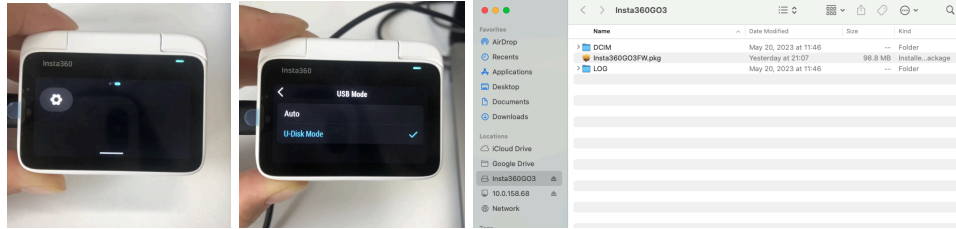

- Open the Insta360 app and tap the camera button

- Tap “Connect now” and follow on-screen instructions to activate and update your camera’s firmware to the latest firmware. If this doesn’t work, open your WiFi settings on your phone and connect to the GO 3 network. The password is: 88888888. Please ensure your phone is not using VPN proxy at the same time.

Step 3: Please update your GO 3 to the latest firmware (directly in the Insta360 app via WiFi or via manual update)

- Via WiFi: Follow the app instructions to update your camera to the latest firmware.
- Via manual update: You can also connect the Action Pod (with GO 3 installed inside) to your computer via the Charge Cable and update the firmware manually by transferring the update file from your computer into the internal storage of the camera.
 - Swipe down on touchscreen to access device settings: Settings - USB Mode - U-Disk Mode
 - You can see a GO 3 device showing on your computer desktop, then paste the "Insta360GO3FW.pkg" file to GO 3 storage directly (Please DO NOT change the pkg file name)
 - Unplug the Charge Cable, GO 3 will automatically turn off
 - Turn on GO 3 again, and wait for the FW update boot up automatically
 - After updating, GO 3 will restart automatically and it is all set now

You can download the **latest firmware** version here:
