ABSTRACT(10 PT)

Abstracts are often presented separately from the article, so they should be able to stand on their own. A well-prepared abstract enables readers to quickly and accurately identify the basic content of a document, determine its relevance to their interests, and thus decide whether to read the document in its entirety. The abstract should be informative and fully self-explanatory, providing a clear statement of the problem, the proposed approach or solution, and indicating the main findings and conclusions. The abstract should be between 100 and 200 words. References should be avoided, but if essential, cite the author and year. Standard nomenclature should be used, and nonstandard or uncommon abbreviations should be avoided, but if essential, they should be defined when first mentioned in the abstract itself. No literature should be cited. The keyword list provides an opportunity to add 5 to 7 keywords, which are used by indexing and abstracting services, in addition to the keywords already present in the title.(9 points).

1. INTRODUCTION (11 PT)

The main text format consists of flat left-right columns on A4 paper (quarto). The text margins from the left and top are 2.5 cm, and from the right and bottom are 2 cm. The manuscript is in Microsoft Word, single-spaced, Times New Roman 11 pt. A concise and factual abstract is required. The abstract should briefly state the purpose of the study, the main results, and the main conclusions. Abstracts are often presented separately from the article, so they must be able to stand alone. For this reason, references should be avoided, but if important, cite the author and year. In addition, non-standard or uncommon abbreviations should be avoided, but if important, they should be defined when first mentioned in the abstract. Immediately after the abstract, provide a maximum of 5 keywords, and avoid common terms.

The Introduction should provide: i) a clear background, ii) a clear statement of the problem, iii) relevant literature on the subject, iv) the proposed approach or solution, and v) the new value of the research that constitutes the innovation (in 6-20 paragraphs). It should be understandable to colleagues from various disciplines. Bibliographic citations are made in the American Psychological Association (APA) style with the following marks (Agnese et al., 2023). According to Alghafes et al. (2024) and so on. Terms in foreign languages are written in italics. The manuscript is divided into several parts, each with its title and numbered sequentially. A complete article follows a standard structure: 1. Introduction, 2. Comprehensive Theoretical Basis and/or Proposed Method/Algorithm (optional), 3. Method 4. Results and Discussion, and 5. Conclusion.

2. METHOD (11 PT)

Explaining the chronology of the research, including research design, research procedures (in the form of algorithms, pseudocode, or others), testing methods, and data acquisition. The description of the course of the research must be supported by references, so that the explanation can be accepted scientifically (Anderson, T. W., & Hsiao, C., 1981). Figures 1 and Table 1 are presented in the center, as shown below and cited in the manuscript..

3. RESULTS AND DISCUSSION (11 PT)

In this section, the research results are explained along with a comprehensive discussion. The research results can be presented in the form of images, graphs, tables and so on which make it easier to understand the research results. readers can easily understand (Aracil, E., 2019). The discussion can be divided into several sub-sections.

3.1. Subsection 1

Equations should be centered on the line and given consecutively with the equation number in parentheses placed in the right margin, as in (1). Use of Microsoft Equation Editor or MathType is preferred.

$$E_v - E = \frac{h}{2.m}\left(k_x^2 + k_y^2\right) \quad (1)$$

All symbols used in the equation must be defined in the following text.

3.2. Subsection 2

Proper citation of other works should be made to avoid plagiarism. When referring to reference items, please use the APA style. ”Ref..... should be used for each reference citation at the beginning of the sentence. For each reference with more than 3 or more authors, only the first author is listed followed by et al.. Examples of reference items from various categories are displayed in the References section. Each item in the references section should be typed using a 10-point font size.

3.2.1. Sub-section 1

Y

3.2.2. Sub-section 2

zz

4. CONCLUSION (11 PT)

Provide a statement that what is expected, as stated in the "INTRODUCTION" section can ultimately produce the "RESULTS AND DISCUSSION" section, so that there is conformity. In addition, it can also be added the prospects for developing research results and the prospects for applying further research to the next stage (based on the results and discussion).

THANK-YOU NOTE(11 PT)

The author would like to thank .... In most cases, thanks for sponsorship and financial support.

REFERENCE(11 PT)

The main reference is international journals and proceedings. All references must refer to the most relevant and current sources and **minimum reference**is 10 entries (for original research papers) and 30 entries (for review/survey papers). References are written in APA style. Use a tool such as EndNote, Mendeley, or Zotero for reference management and formatting, and select APA style. Please use consistent formatting for references—see example (10 pt):

[1] Journal/Periodic publication

Basic Format:

JK Author, "Title of paper," Abbreviated Title of Journal/Periodic Publication, vol. x, no. x, pp. xxx-xxx, Abbreviated Month, year, doi: xxx.

Example:
