# Change Your Google/Chromebook Password
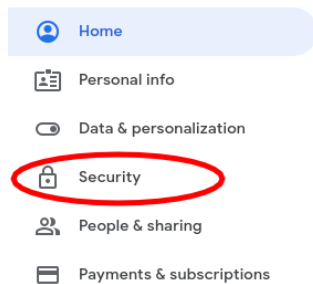

- Log in to your Chromebook

- Open a Google Chrome browser window

- Click on your picture in the upper left corner

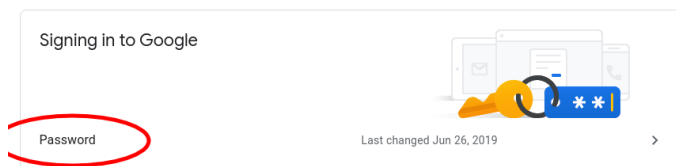

- Select "Manage your Google Account" (this will open a new window with account information)

- Select "Security" from the right menu bar (this will go to a new page)

- Find "Signing in to Google" part way down the page. Click on the word "password" just below it.

- This will bring you to a new screen that asks you to login in again (for security) and then let you enter a new password. Make sure you enter it twice (for verification).
