

Raindrop IO

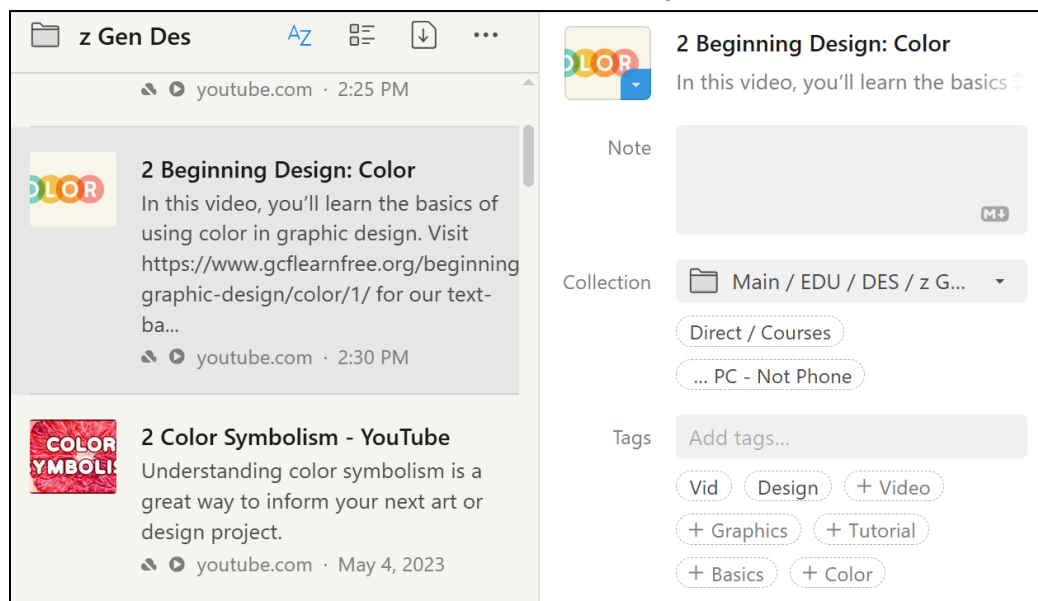

You might want to think about getting it. I use it because I can add information to bookmarks, categorize them, add tags, etc. It's most helpful for learning

For learning, I can also add the last time I viewed so that I know when to review again. I can even add particular notes from the piece. It will take almost unlimited info.

Here's the link to get the free version. I have it on my PC. I think there is a phone version too but I'm not exactly sure.

[Raindrop Free](#)

The menu panel is on the left with the edit on the right.

My dirty little secret is also that I had more than 50,000 bookmarks and they became unmanageable. I selectively brought the most useful to Raindrop and can now manage them.

That's kind of the main problem with Chrome Bookmarks. You can't really organize them, search by specific folder, etc. The search limitation was among the most annoying. Any search looks in all folders so you can't limit it to the most recent folders you're using.

If you're interested but not sure how the download works or how functionality works, I can show you Sunday.
