

## YARE collaboration and cooperation technology - networking

Find out here how YARE can revolutionize your everyday work:

### Effortless organization management

With YARE, you can effortlessly manage your organizational structure, whether it's an initiative, association, citizens' movement, grassroots movement or NGO.

YARE streamlines the management of actions, processes, thesis management, topics, events and campaigns and ensures that all your activities are well-coordinated, efficient and trackable.

### Comprehensive event management

It has never been easier to organize events and processes within your own organization or together with other organizations. Whether meetings, actions, theme groups, work processes, campaigns or panel discussions, the YARE event management tools ensure that everything runs smoothly from start to finish.

### Structured cooperation

YARE supports a clear bottom up with low hierarchical structure that enables collaboration at national, state, local/regional to neighbourhood level between citizens, organizations and municipality/state with sophisticated role management. With integrated matching (AI) and the integrated map, you can quickly locate topics, appointments and groups and facilitate seamless communication and collaboration across different organizational levels and organizations.

### Powerful membership management

Manage your members easily with YARE. Keep track of contact information, responsible persons, statuses, group events, documents, tamper-proof elections and voting. Whether it's managing group chats, topics, forums, etc. or adding new members, it's all just a click away.

### Dynamic communication tools

Communicate directly with members via internal direct and group messages or send emails effortlessly. Keep everyone informed and involved with this robust communication platform.

### Comprehensive knowledge management

A comprehensive knowledge database is maintained in YARE. This database enables you to record and document topics thoroughly. Various forms of discussion through to thesis management are facilitated to ensure that every voice is heard when questions arise.

### Thesis management

With YARE's thesis management system, topics can be thoroughly discussed, scientifically supported and refined through the steps of thesis, antithesis and synthesis. This ensures an in-depth examination of the topics and contributes to the achievement of well-founded and reliable results.

#### Advanced campaign management

Manage your campaigns effectively at thematic, national, state and local/regional levels. Whether it's planning or execution, our tools will help you stay organized and on track down to the smallest detail.

#### Secure and transparent elections

Conduct three types of elections and two types of voting within all group types and across groups to ensure democratic participation and transparency. Protection against trolls and multiple accounts through our verification system is secured.

#### Network integration and automation

Integrate external systems via SSO, manage social media automatically or semi-automatically with approval mechanisms and use our reporting/ticketing processes for optimal efficiency.

#### Unrivaled user support

Set up internal mailboxes and chats as well as email inboxes within your groups and for individuals to ensure smooth and fast communication and coordination. This integration helps teams to be immediately supported and informed at every step, even in the simple things.

Experience the future of information and communication management with YARE. Are you ready to change your workflow?

Get in touch with us to discuss your budget and implementation timeline.

The result will be that we realize your goals with minimum effort and maximum impact.

YARE was developed on the basis of intensive discussions and workshops with experts from various academic disciplines such as communication, media policy, philosophy, social sciences and practical work.

#### Executive Summary

YARE is the comprehensive platform solution that solves the existing barriers to perfect network-wide collaboration and thus makes a significant contribution to securing our common goals in the context of the upcoming transformation and a sustainable future.

YARE: A structured development cycle

Overall development period: 2013 to 2024

2013 to 2018: Conceptualization

The foundation for YARE was laid in an intensive, five-year conceptualization process. During this phase, the fundamental ideas and visions were developed that later formed the basis for the software. The aim was to create a platform that enables comprehensive digital collaboration and effectively addresses the challenges of interdisciplinary collaboration.

2018 to 2021: Coding under scientific supervision

Since 2021, the team has been focusing on the ongoing coding and optimization of YARE. This stage of development is characterized by the implementation of advanced features and the continuous improvement of the platform to meet the ever-changing needs of users and further increase the efficiency of digital collaboration.

This structured development cycle has enabled YARE to grow into a robust and powerful platform that enables full digital collaboration for the first time and thus ensures effective, interdisciplinary collaboration in various areas.

YARE: The solution

According to our findings to date, only a few scientific, educational (ESD), welfare and forFuture sectors are working together on an interdisciplinary basis in the upcoming and urgently needed transformation (e.g. environmental and resource security, social, economic and political stability, security and conflict). After short joint projects, the disciplines involved often withdraw back into their respective areas of expertise and interest without making further effective use of the resulting synergies, as there is currently no digital collaborative cooperation that goes beyond the functional scope of a simple solution such as MS Teams.

Our software server solution, YARE (Collaborat-Action-System), offers an optimal platform for solving these challenges. Using the latest DBM server technology, which can be accessed via API, we enable comprehensive networking and collaboration. This allows the closely linked problems of our time to be brought together, analyzed and made accessible in a holistic manner. In particular, our platform enables parallel, agile implementation of processes, which reduces overall process times enormously and moves away from time-consuming sequential processing.

API for full stack front end developers

With the API of our system, experienced full stack front end developers can create customized template solutions for the respective specialist and target directions. The flexibility and adaptability of the platform makes it possible to implement specific process requirements.

Extensive API access

Our API provides access to hundreds of functions and tools of the server's DBM matrix. This comprehensive toolbox makes it possible to carry out complex teamwork and use versatile tools for troubleshooting.

Our revolutionary technology enables unbeatable learning by doing that takes into account the latest mega, macro and micro trends and supports outstanding think tank visions through machine learning and acceleration processes. This innovative platform accelerates all processes, guaranteeing an unbeatable edge in the changing education and transformation landscape of the future. Our groundbreaking multi-perspective technology sets new standards and is the key to efficiently accelerating all collaboration processes.
