## 10 Signs You Need to Replace Your Siding

Here are some common signs that indicate it's time to install new siding on your home:

### 1. Cracked or Warped Siding

- Visible cracks, warping, or buckling are clear indicators that your siding is no longer protecting your home properly.

### 2. Faded or Peeling Paint

- If the paint on your siding is constantly peeling or fading, it may be a sign that the siding is losing its protective qualities.

### 3. Rotting or Mold

- Any rot or mold on or beneath the siding indicates moisture problems. This is a major red flag for the overall structural integrity.

### 4. High Energy Bills

- Worn or damaged siding may lead to poor insulation, which can cause a noticeable increase in energy costs for heating or cooling.

### 5. Interior Wall Damage

- Peeling paint, wallpaper, or mold inside your home might mean moisture is penetrating through damaged siding.

### 6. Loose or Missing Panels

- If panels are coming loose or falling off, this compromises your home's protection against the elements.

### 7. Bubbling or Blisters

- Bubbles or blisters in the siding can indicate that water is trapped behind it, a sign of serious moisture damage.

### 8. Frequent Need for Repairs

- If you constantly need to repair your siding, it may be more cost-effective to replace it altogether.

## 9. Holes or Pest Damage

- Holes from insects or pests can affect the siding's ability to protect your home from weather elements.

## 10. Outdated Appearance

- Sometimes, updating siding is necessary for aesthetic reasons, especially if it looks dated or no longer fits your style.

If you're noticing any of these signs, it may be time to consider installing new siding to maintain the structural integrity and aesthetics of your home.

## What's the Best Siding Material for Illinois Homes

In Illinois, where homes experience a wide range of weather conditions—including cold winters, hot summers, and potential storms - choosing the right siding material is crucial. The best options for Illinois homes typically balance durability, energy efficiency, and aesthetic appeal. Here are some of the top choices:

Vinyl - 63%

Brick - 21 %

Fiber Cement - 12%

**Top Recommendation:** Fiber cement siding is a popular choice in Illinois due to its durability, low maintenance, and ability to handle the state’s diverse climate. Vinyl siding is also a good, more budget-friendly option for those prioritizing cost over longevity.
