- Increases buttock volume
- Results last 2-3 years
- Combines perfectly with CoolTone + QWO cellulite injections

Sculptra BBL Before and After*

Sculptra BBL Before and After images show the dramatic results possible with this nonsurgical Brazilian Butt Lift option. As with any cosmetic experience, patient results will vary.* However, when Sculptra fillers are administered by a reputable professional like the staff at Advanced Rejuvenation Centers, you receive safe and reliable results like fuller, more shapely buttocks.

Sculptra Butt Injections

Sculptra for a Brazilian Butt Lift, BBL, is a revolutionary way to add more shape and volume to the buttocks without surgery. A Sculptra BBL enhances the natural curves using a popular dermal filler to stimulate collagen growth in the skin. This form of a non-surgical BBL allows each patient to achieve a fuller, rounded look without surgery or a complicated recovery.

BBL Surgery vs Non Invasive BBL

This idea of a non-surgical Brazilian Butt Lift is different from the regular BBL, where fat is taken from the patient's body and inserted into the buttocks. Sculptra BBL is minimally invasive, does not require anesthesia, does not involve a fat transfer, and has little to no downtime.

What is Sculptra?

Sculptra is the only FDA-approved poly-L-lactic acid (PLLA) filler capable of building long-lasting volume. However, this filler is also progressive, so the volume and results only improve gradually over time. Poly-L-Lactic Acid is an injectable, biocompatible formula. It consists of poly-L-lactic acid microparticles, a polymer of the alpha-hydroxy-acid family that easily and safely absorbs into the body.

How Does a Sculptra BBL Work?

When Sculptra filler injects into the buttocks, it adds fullness. It also improves the quality of the skin due to the increase in collagen production. Collagen, a natural substance in the skin, helps skin remain firm. Unfortunately, the skin's natural collagen depletes as we age, leading to drooping or sagging skin. Sculptra promotes collagen, allowing the skin to appear healthier and more youthful. In addition, this injectable requires no sedation, incisions, downtime, or scarring.

A topical anesthetic is often incorporated to ensure optimal comfort during your Sculptra BBL procedure. The buttocks are marked before the procedure, indicating regions for desired enhancements. In a standing position, your physician assesses and marks the treatment areas. Lidocaine may be added to the Sculptra formula to provide anesthesia. After the treatment, the site is massaged for a few minutes to ensure the product is spread throughout. Sculptra for a nonsurgical Brazilian Butt Lift is often completed in less than an hour.

Who is a Good Candidate for Non Surgical BBL?

A Nonsurgical BBL is not a suitable procedure for everyone. Ideal candidates are ideal for individuals that do not qualify for a traditional BBL because the person does not have enough fat deposits in the donor region for a fat transfer. It is also perfect for anyone wishing to enhance their buttocks without severely invasive means, surgery, or significant downtime.

If you question your treatment candidacy, schedule a consultation with the specialists at Advanced Rejuvenation Centers. During a consultation, you interact with our knowledgeable staff, who evaluates your body, assesses your medical history, and determines if Sculptra is right for you.

Sculptra BBL Results

Sculptra provides immediate and long-lasting results, sometimes lasting up to two or three years. This filler promotes collagen production within the skin, the skin thickens and improves volume over time. Your BBL results are progressive. This means they get better over time following your procedure. Many

patients elect to receive multiple Sculptra treatment sessions over the course of months to achieve maximum results. The buttocks maintain more symmetrical and volumizing effects with re-applications of injections. The treatment prevents scarring, does not require a long recovery, and is the perfect nonsurgical BBL alternative.

Combining Sculptra BBL with CoolTone + QWO Shots

When you combine your Sculptra BBL with powerful CoolTone sessions you achieve an increase in muscle mass. Take it one step further by committing to QWO “cellulite shots” for a total booty transformation. QWO achieves visibly smooth, soft skin in addition to the Sculptra and CoolTone buttocks enhancements.

CoolTone Muscle Definition

Advanced Rejuvenation Centers also provide one of the most popular body sculpting treatments, CoolTone. This treatment uses Magnetic Muscle Stimulation to enhance the muscles of the glutes. Treatments build, tone, and firm the muscles of the buttocks providing a subtle lift, more definition, and stronger muscles.

QWO Cellulite Injectable

The QWO cellulite injectable is the first and only cellulite shot approved by the FDA. This popular cellulite treatment improves skin dimpling for smoother skin. QWO is a minimally invasive procedure for treating moderate to severe cellulite.

Non Surgical BBL Near Me
