How to cite:

INTRODUCTION

Introduction must contain research background and purpose. The research background explain about the problem, research issue, and analysis gap or novelty clearly. This should support with data or previous research.

The research purpose explain about what are we want to reach in those research based on research background. Introduction consists of five to ten sentences and each of paragraph should contain at least on quote. The research purpose write in narration, not point over point.

LITERATURE REVIEW AND HYPOTHESIS DEVELOPMENT¹

Sub Chapter 1

Literature review and hypothesis development allow to be constructed by some sub chapter. Literature review consist of literatures (issue, theory, previous research, phenomenon) which related to the research. Literature review not consist of research theory definition nor variable definition, but rationalitation of how those literatures underlie and support the research.

H₁: first hypothesis

Sub Chapter 2

If research is using hypothesis then the literature review must consist of hypothesis development. Hypothesis development explain about reasoning of how the hypothesis build, not again explain about common definitions and not only consist of support from previous research.

H₂: second hypothesis

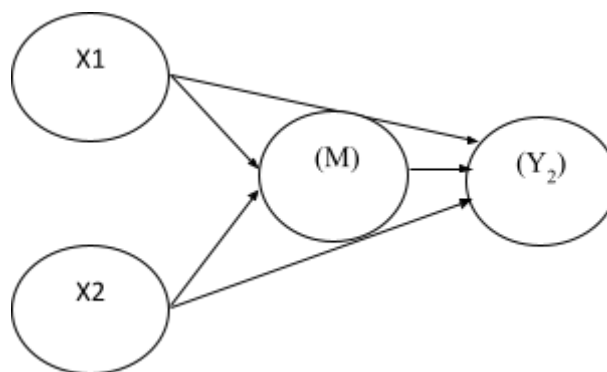

Figure 1. Framework

RESEARCH METHOD

Research method explain about the usage of it to reach nor answer the research purpose on the Introduction section. Research method should contain: (1) type of research, (2) research sample and population (including choosing sample method clearly), (3) source and method of data collection, (4) variable operationalization (if using variable), (5) data analysis method.

If the research has qualitative research type then the using analysis method should be explain clearly. Research method no need to have any definitions from using method, including the variable operationalization.

¹ For qualitive research, use only "Literature Review".

RESULT AND DISCUSSIONS

Result and discussions should contain: (1) statistic result (if using statistics (what element), do not copy paste from the output of statistics tool test), (2) interpretation statistic result (how element), (3) discussion nor rasionalitation from statistic result if associated with previous literatures and associated with research purpose (why element). This section also explain about suitability or differences of research result with previous research. In the discussions no need to serve the definitions. The discussion also includes the author's opinion regarding the research results.²

CONCLUSION

Conclusion should contain: (1) the research results conclusion and (2) the research result implication. Conclusion is a concise discussion of the research. Research implication is the effect nor direct result from research results then could formulated the real suggestion for practice. No need to include the limitation of research.
