**Abstract (Blod, 12 pt) Both English and Indonesian**

The manuscript should contain an abstract within 250 words. The manuscript should have a self-contained, citation-free abstract and state briefly **the purpose of the research, methodology, results and conclusions**. Abstract should be in a single paragraph with running sentences. Do not use any subheading or point list within the abstract. Also, non-standard or uncommon abbreviations should be avoided, the citations should not appeared in the abstract.

**Keywords:** *provide 3-5 keywords; write in alphabetical order*

**INTRODUCTION**

Introduction contains justification of the importance of the study conducted. The introduction should contain the brief idea of work, problem statement, and Authors contribution towards their research. Sufficient recent reference citation from last 10 years should be included to illustrate the existing challenges and importance of current work. This section should be succinct, with no subheadings unless unavoidable. State the objectives of the work and provide an adequate background related to the current work. The last paragraph must indicate the methods used and the purpose or hypothesis of the study. Reference writing uses Vancouver style with super script number.<sup>1</sup>

**METHOD**

This section should contain sufficient detail to reproduce reported data. It can be divided into subsections if several methods are described. Methods already published should be indicated by a reference.<sup>2</sup> only relevant modifications should be described. Methodology should be written

concisely in detail by maintaining continuity of the texts.

**RESULT**

The Result section presents the data and its interpretation. This should explore the significance of the results of the work, don't repeat them. The findings are sorted by the objectives of the study or the research hypothesis.

**Table format**

Table should be formatted as the following example.

**Table 1.** Table title

N	Data	Data	Data (unit)
o			
1	Data	Data	Data
2	Data	Data	Data

**Figure**

All figures should be placed in the body text of the paper in a consecutive order. Figures should be used in the format of JPEG, PNG, TIFF, etc.

with 300 dpi resolution at least. Figure 1 shows the logo of jite journal.

**Figure 1.** Journal picture.

## **DISCUSSION**

Avoid extensive citations and discussion of published literature only, instead discuss recent literature for comparing your work to highlight novelty of the work in view of recent development and challenges in the field. The discussion must be related to the problem stated in the background, and directed at an answer to the research hypothesis. No more statistical or other mathematical symbols in the discussion. Emphasis was placed on similarities, differences, or the uniqueness of the findings obtained. It is need to discuss the reason of the findings.

## **CONCLUSION**

Conclusion should be written in continuous manner with running sentences which normally includes main outcome of the research work. The conclusion is the answer of the hypothesis that leads to the main purpose of the study. Its implication, limitation and recommendation. Avoid using subheading, citation, or references.

## **CONFLICT OF INTEREST**

No potential conflict of interest was reporetd by the authors

## **ACKNOWLEDGEMENT**

Acknowledgement (if any) may include peoples or organization who contributed to the

work in the manuscript but not listed in the author list.

## **REFERENCES**

All references should be cited correctly within the text; avoid adding only list of references without citation. The accuracy of reference data is the responsibility of the author. Cite references in numeric order according to the first mention in the text and write them according to the Vancouver rules. Include the name of the authors with a maximum of 6 authors. If there are more than six authors, write the names of the first six authors and then add “et al”. The number of references should **exceed 15** with all of them dated from the past **10 years**. Only **20 percent** of the references should come from textbooks with the rest comes from journals. References from articles that have been received and awaiting publication in a particular magazine should be written as “in press”. (The following references are used for an example purpose only)

1. Jacobs DS, DeMott WR, Finley PR, Kasten BL, Tilzer LL, et al. Laboratory test handbook. 3<sup>rd</sup> ed. Hudson: Lexi-Comp Inc, 2021.
