should share email address)

ABSTRACT

1. Include Research Problem, Method, Main Results, and Conclusion
2. Report quantitative results in APA Style 7th ed
3. Number of words not more than 250 words.
4. Use font Arial, and size 9 point.

Keywords: List 4 - 5 keywords

| Received xx | Accepted xx | Available online xx |

[Not to be added by the authors]

1. INTRODUCTION

[Format for preparing body of manuscript section:]

1. Use Candara font; size 11 pt.
2. Use only English (United States).
3. The format of headings, subheadings, tables, and figures are provided in the template. These are based on APA style 7th edition.

[Main Contents]

Start with the Introduction

This section should mention the background and importance of the problem clearly with supporting citations, and end with the purpose of the research.

What is the purpose of the study? Why are you conducting the study? The main section of the article should start with an introductory section, which provides more details about the paper's purpose, motivation, research methods and findings. The introduction should be relatively nontechnical, yet clear enough for an informed reader to understand the manuscript's contribution.

The "introduction" in the manuscript is important to demonstrate the motives of the research. It analyzes the empirical, theoretical and methodological issues in order to contribute to the extant literature. This introduction will be linked with the following parts, most noticeably the literature review.

Explaining the problem's formulation should cover the following points: (1) Problem recognition and its significance; (2) clear identification of the problem and the appropriate research questions; (3) coverage of problem's complexity; and (4) well-defined objectives.

2. LITERATURE REVIEW (Heading Level 1)

The literature review section should consist of the definitions of the main variables, theories, and related research about the study variables. Literature review investigates the gap that will be exposed and solved. The flow of all the ideas are required to be clear, linked, well-crafted and well developed. It serves as the source of the research question and especially the base or the hypotheses that respond to the research objective. We advise using current and primary sources from trusted international references (top tier-journals). Authors should clearly mention the research objectives / hypotheses and show the conceptual framework (if you have).]

(Heading Level 2) Flush Left, Bold Italic

Text begins as a new paragraph.

Hypotheses of the research

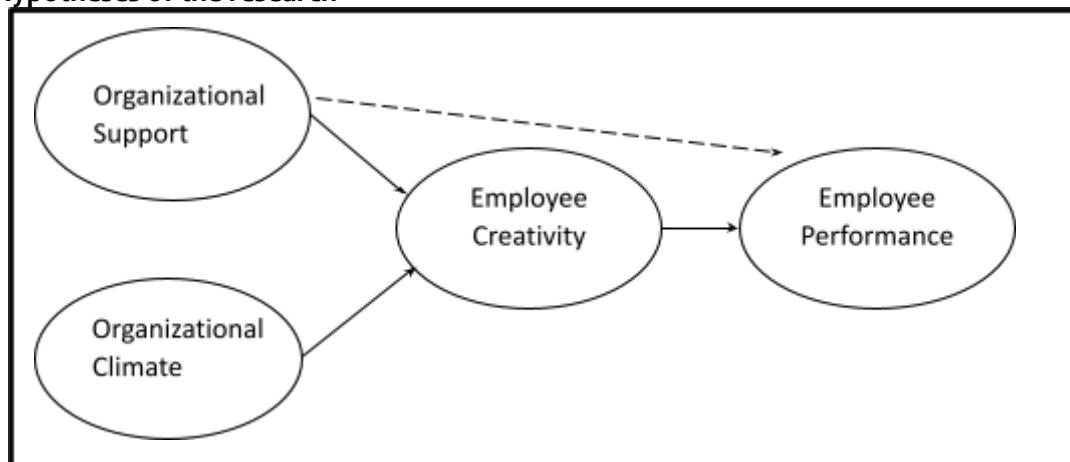

Figure 1. Proposed Conceptual Framework

3. METHODOLOGY

[Method section should include information about participants/sample, instruments, procedures, and data analysis]

4. RESULTS

[The Results section should begin with a short description of the contents, followed by a systematic sequence of results with tables and figures to support.]

This chapter contains the results of the analysis carried out, if there are tables, charts, or images that are prohibited from print screen, and must be given information on how to read and understand them.

Table and Figure

Authors must provide high quality artwork for all illustrations. Poor resolution or definition is not acceptable. All tables and figures (graphs) should be included directly in

the appropriate part of the article (not separated). Each table or figure should be numerically numbered separately (Table 1, Table 2; Figure 1, Figure 2) and fully titled, which refers to the contents of the table or figure. Underneath each table and figure, state the reliable source. Use only horizontal lines, 1.5 spaced

Table 1. Title of The Table

Column 1	Column 2	Column 2	Column 2
Abcde1	0.XXX	0.XXX1	0.XXX2
Abcde2	0.yyyy	0.yyyy1	0.yyyy2
Abcde3	0.zzz	0.zzz1	0.zzz2
Abcde4	0.aaaa	0.aaaa1	0.aaaa2

5. DISCUSSION

[This section should include the discussion of the main results with supporting references of research; limitations of the research; implications of the results.].
(Implications Contributions to content, and future research and applications)

Text begins as a new paragraph.

Authors should explain the empirical and theoretical benefits, the economic benefits, and the existence of any new findings. The author may present any major flaws and limitations of the study, which could reduce the validity of the writing, thus raising questions from the readers (whether, or in what way), the limits in the study may have affected the results and conclusions. Limitations require a critical judgment and interpretation of the impact of their research. The author should provide the answer to the question: Is this a problem caused by an error, or in the method selected, or the validity, or something else?

6. CONCLUSION

Text begins as a new paragraph.

In this section, the author presents brief conclusions from the results of the research with suggestions for advanced researchers or general readers. A conclusion may cover the main points of the paper, but do not replicate the abstract in the conclusion.

7. REFERENCES

Use a reference application, for example: Mendeley, Zotero, and other reference applications used APA Style 7th Edition. **Use Candara font; size 11 pt; Capitalize Each Word.**

Note: Can add CHAPTER other than those listed above if needed
