

Audio List

In my short film I intend to shoot using the camera mic as well as the additional mic for the camera. I will also record separate sounds and effects using a sound recorder, they will include:

- Clock ticking
- Bed shuffling
- Steps
- Pen
- Paper

The majority of the sound effects will be added in later when editing, just to enhance them more. In addition to what I will record myself I also will need to download and find alternative sounds to add into my film when editing, these include:

- News reports
- Additional *suspense* sound effects
- Television noise

It is important that I download the footage/mp3 for the edit of my film, this will really bring it to life and make it really effective and addictive for the audience to watch and want more. The advantage of downloading content to use is that it is easy accessible, and I can adapt it how I wish, the reason for not recording all my own audio is that I need real news reports that have happened, this makes the film appear more realistic for the audience.
