Title: AI in Healthcare Isn't What You Think

Description:

Artificial Intelligence has seemingly taken over every industry and headline in the past year, making it hard to keep up with advances in the technology. And things are evolving quickly, particularly in medicine. Here to help us understand where AI can help and hinder processes in the medical industry is Dr. Nina Kottler, a radiologist and AI expert. Before that, we explore a new study detailing some surprising findings in koala population genetics and later, Sam looks into research on how other people's opinions shape our own experiences.

Koala Genetics

- "Escaping bottlenecks: The demographic path to genetic recovery in koalas (*Phascolarctos cinereus*)."

Opinions vs Experiences

- "Social information creates self-fulfilling prophecies in judgements of pain, vicarious pain, and cognitive effort."
[by Aryan Yazdanpanah, Heejung Jung, et. al. 2025.](#)
