

Early Stage Political Technology Startup- Software Engineer

Passionate about data-centric software, politics, and changing the way political and government engagement works?

At Civi, we're automating political operations, community engagement, and government relations. Our first product centralizes key CRM features into one easy-to-use platform for political and government relations with the most comprehensive and complete data on the market. Our users will include political campaigns, government affairs teams, political consulting firms and organizations, and pretty much any political-adjacent entity.

We're looking for an experienced full-stack developer to help finalize and launch our MVP (and ideally evolve into a technology leader at Civi). Expertise in database development and API integrations is required. A list of requirements based on our current software stack:

Required Experience:

- Python
- PostgreSQL, SQL Alchemy
- AWS (Fargate, RDS)
- NGINX
- Javascript, React, Tailwind UI components a plus

To give you a sense of what you'd be working on:

- Database development and migration to AWS
- Code and database design familiarization, performance testing and optimization
- Maintain/enhance existing data source API integrations and integrate new APIs
- Establish a continuous integration (CI/CD) practice and corresponding automation from commit to deploy
- Long term: building a robust web scraper that can gather contact info from thousands of various sites
