Non Uniform Sparsity Experiment Figures

Base Scenario with uniform sparisty across features :

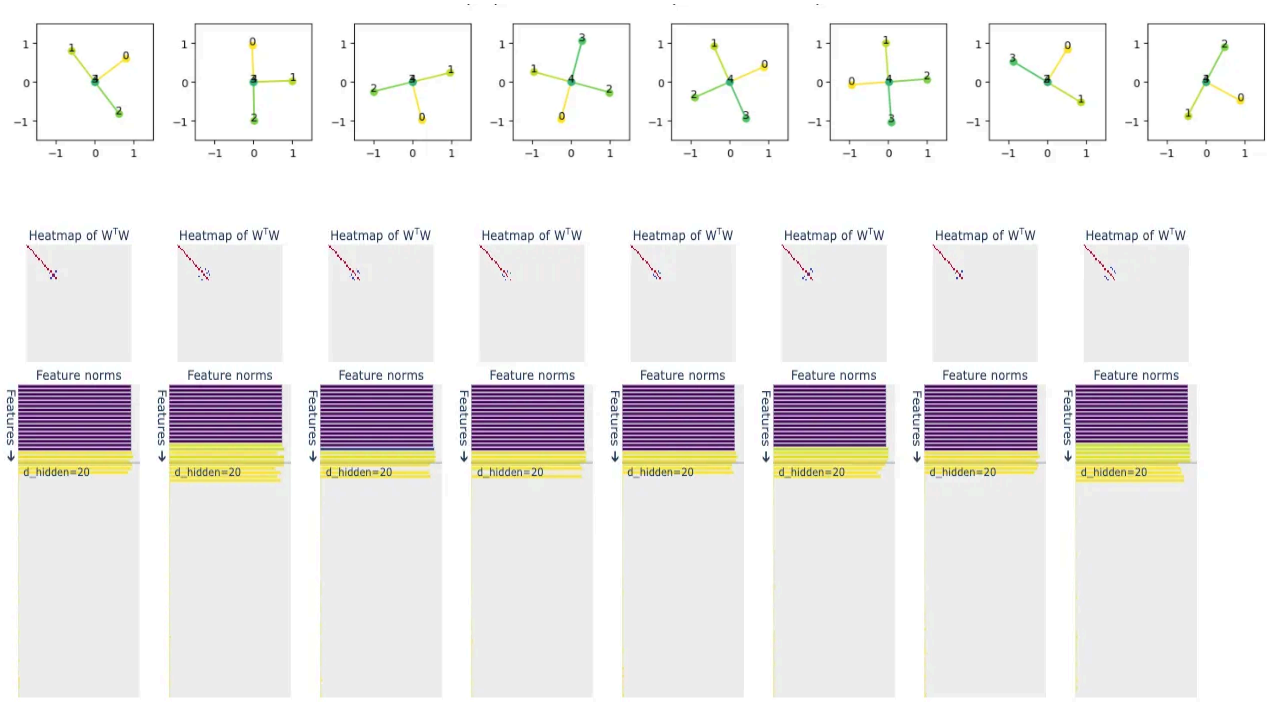

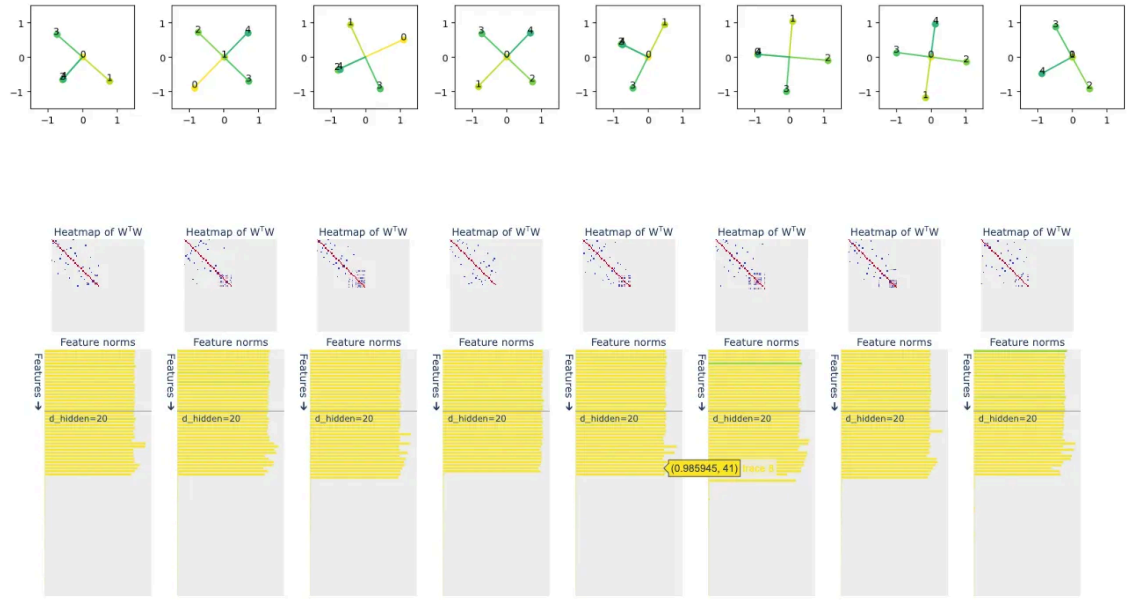

Snapshot of all the cases considered

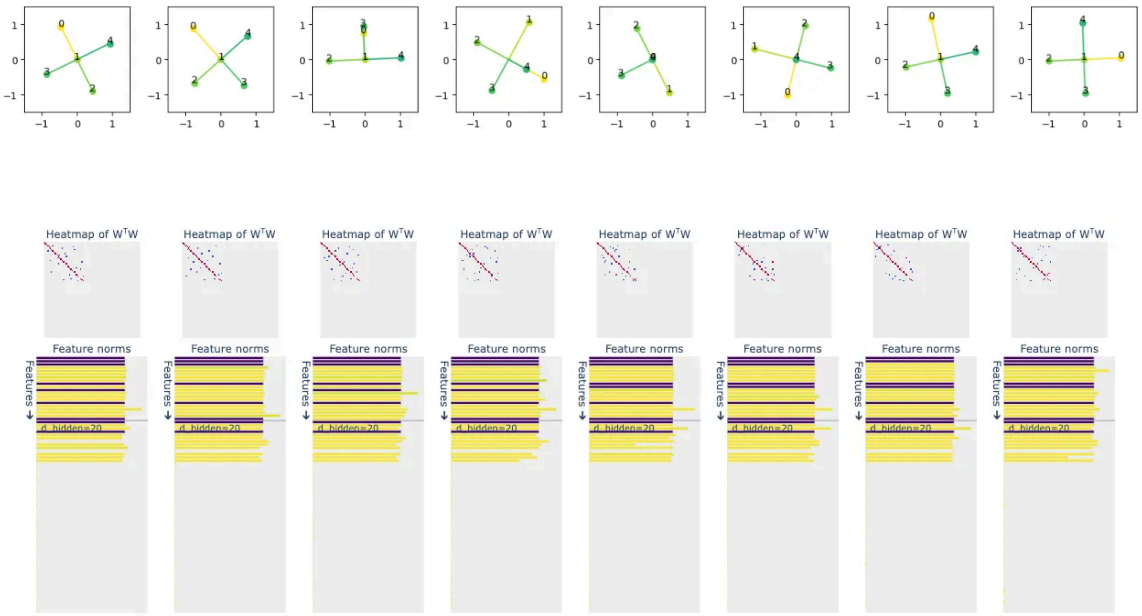

Case 1 : Feature with the highest importance has the least sparsity and as we go down feature importance, the sparsity increases

Case 2: Feature with the highest importance has the highest sparsity and as we go down feature importance, the sparsity decreases

Case 3: Random feature sparsity across features

Case 4: Constant feature importance and increasing feature sparsity (similar to Case 1.)
