

Take Notes

- Textbooks
 - Supplying enough physical textbooks for every student is not feasible (financial aid office for that)
 - Can look into getting a few more than 1
 - Some textbooks are reserved by the professors for classes.
 - Deans encouraged communication between professors and libraries to make online or free resources available when possible.
- Course Manuals
 - a hackathon-style initiative that pays students to collaborate on manuals, instead of relying on volunteers.
 - Faculty support will be gauged, should be done by the end of fall semester.
 - Issue with Principedia: past efforts failed due to lack of continuity—as students graduated, new participants weren't recruited, and upkeep was less appealing once the initial build was complete.
- Foundational Abilities (FA) Course Tagging Issues
 - Need and currently looking into for a better system for students to report missing FA tags (e.g., when a tag disappears from SIS or Stellic).
 - Dean Rowe: Most KSAS courses that count toward a major or minor will eventually be tagged
 - A technological fix may have been found to address the mismatch between SIS and Stellic systems.

- Public Health and Business School courses remain problematic since SIS doesn't automatically tag them.
- The Registrar resists "retroactive tagging," but Dean Rowe supports it, framing it as "fixing" rather than retroactively changing records.
- WSE (Engineering) is expected to avoid these tagging problems, as its FA system will roll out in Fall 2025 instead of Fall 2024.
 - Not too many complaints so far, only 1 semester of data
- Reposting the Deans
 - Dean Rowe plans to post updates but needs some help
 - Dean Falk only posts dog pictures 😊
 - There's also an official "undergrad academic affairs" account? I couldn't find it
