

**Paper Title (Times New Roman 12 pt)****First Author<sup>\*,a,1</sup>, Second Author<sup>b,2</sup>, Third Author<sup>c,3</sup> (Times New Roman 11, Bold, spasi 1)**<sup>a</sup>First Affiliation, City, Country (Times New Roman 10 pt)<sup>b</sup>Second Affiliation, City, Country<sup>c</sup>Second Affiliation, City, Country\*Corresponding Author: [ijets@utv.ac.id](mailto:ijets@utv.ac.id)**Abstract (TNR 10 pt, Bold, Center)**

The abstract should be written in English (Times New Roman, 10-point font), consisting of 200 to 250 words, and must include **five key components**: a brief introduction, research aims, method, results, and recommendations or limitations. **A brief introduction** should succinctly highlight the urgency or significance of the topic, issue, or product under study, limited to a maximum of two sentences. **The research aims** should clearly articulate the problem formulation or objectives of the study, directly related to the issues outlined in the introduction. The **method** must detail the research design and setting, techniques for data collection and data analysis. It should provide a clear description (not point per point) of the stages and techniques employed to obtain data that address the research problem or achieve the stated objectives. **The results** section should emphasize the novelty or significant findings of the research, ensuring they are relevant to the study's focus. Finally, **the recommendations or limitations** section should provide practical suggestions, such as policies, concepts, methods, or theories, or discuss the study's limitations and propose directions for future research.

**\*CRITICAL NOTE (delete it in your manuscript):****Do Not use symbols, special characters, footnotes, or math in the paper title and/or abstract****Keywords:** 3 - 5 keywords separated by comma (,) Title Case, eg. Robot Car Prototype, Arduino Uno, ...**I. INTRODUCTION**

The introduction should be formatted using Times New Roman, 10 pt font, with single line spacing (1.0) and no additional spacing before or after paragraphs. **It should consist of five to six paragraphs**, with each paragraph containing a minimum of 10 lines and a maximum of 15 lines. **The first paragraph** should provide a description of social facts, supported by data obtained from observations or credible sources such as official government websites, to establish the urgency of the selected topic, issue, or product. **The second to fourth paragraphs** should focus on literature-based evidence, identifying gaps or shortcomings in at least fifteen of the most recent and relevant studies on the topic. This discussion should highlight the necessity and distinctiveness of the manuscript, as well as its theoretical framework. **The fifth paragraph** should evaluate these earlier studies to position the current study's focus clearly. **Finally, the sixth paragraph** should outline the research questions, objectives, arguments, or hypotheses to be addressed in the study.

**II. METHOD**

The method section should be structured in Times New Roman, 10-point font, with single spacing and no additional spacing before or after paragraphs. It is recommended that this section consists of one to three paragraphs, with each paragraph containing between 10 and 15 lines. To ensure clarity and comprehensiveness, the method should address five key elements. First, it should provide a clear rationale for selecting the topic, issue, or product as the study's focus, explaining its relevance or significance. Second, the research design employed should be thoroughly described, outlining the approach taken to conduct the study. Third, the sources of data and the procedures used to select them should be detailed, providing transparency regarding the research process. Fourth, the techniques or methods used for data collection should be explained, highlighting their appropriateness for the study objectives. Finally, the section should describe the processes and stages undertaken to analyze the collected data, ensuring a clear link to the research questions or objectives. To enhance clarity, authors may also present specific methodological components using flowcharts where appropriate. This approach not only provides a structured overview but also aids in effectively communicating the study's methodological framework.

### III. RESULTS AND DISCUSSION

**A. Sub-heading 1 (refers to first research question or aim) (Title Case, italic, bold TNR 10pt)**

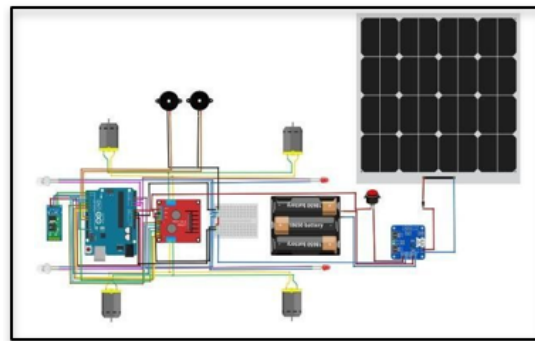

**B. Sub-heading 2 (refers to second research question or aim)**

**C. Sub-heading 3 (refers to third research question or aim...)**

The Results and Discussion section should be formatted using Times New Roman, font size 10 pt, with single spacing (1.0) and no additional space before or after paragraphs. The results presented must be directly connected to and relevant to the research questions or objectives, as addressed by the chosen methodology. Each paragraph should contain a minimum of 10 lines and a maximum of 15 lines for consistency and readability. If the article addresses three research questions or objectives, this section must include three corresponding subheadings. Each subheading should present and elaborate on the findings related to one specific research aim or question. Furthermore, every subheading should integrate and critically discuss findings from at least five recent and relevant references to highlight the significance or novelty of the study in relation to earlier research.

**Table 1 Test Result for Bluetooth Connection (table font can be 8 to 10 pt)**

<b>Trials</b>	<b>Distance (Meter)</b>	<b>Results</b>	<b>Information</b>
1	7 m	Connected	The car can be controlled
2	14 m	Connected	The car can be controlled
3	21 m	Connected	The car can be controlled
4	28 m	Connected	The car can be controlled
5	35 m	Connected	The car can be controlled

**Figure 2 Control Circuit**

**Note: Every table or figure must be explained or described (put your explanation under the table or figure)**

### IV. CONCLUSION

The conclusion section should be written in Times New Roman, 10-point font, with single spacing (1.0), and no additional spacing before or after paragraphs. It must consist of **two paragraphs**, each containing a minimum of 10 lines and a maximum of 15 lines. **The first paragraph** should present the critical findings of the study, focusing on their relevance to the research questions or objectives. **The second paragraph** should discuss the significance or contribution of the study, whether conceptual, methodological, or theoretical. Additionally, it should also address the study's weaknesses or limitations, providing recommendations for future research to address these gaps.
