

1. Boot up the Chromebook
2. Press Esc + Reload + Power

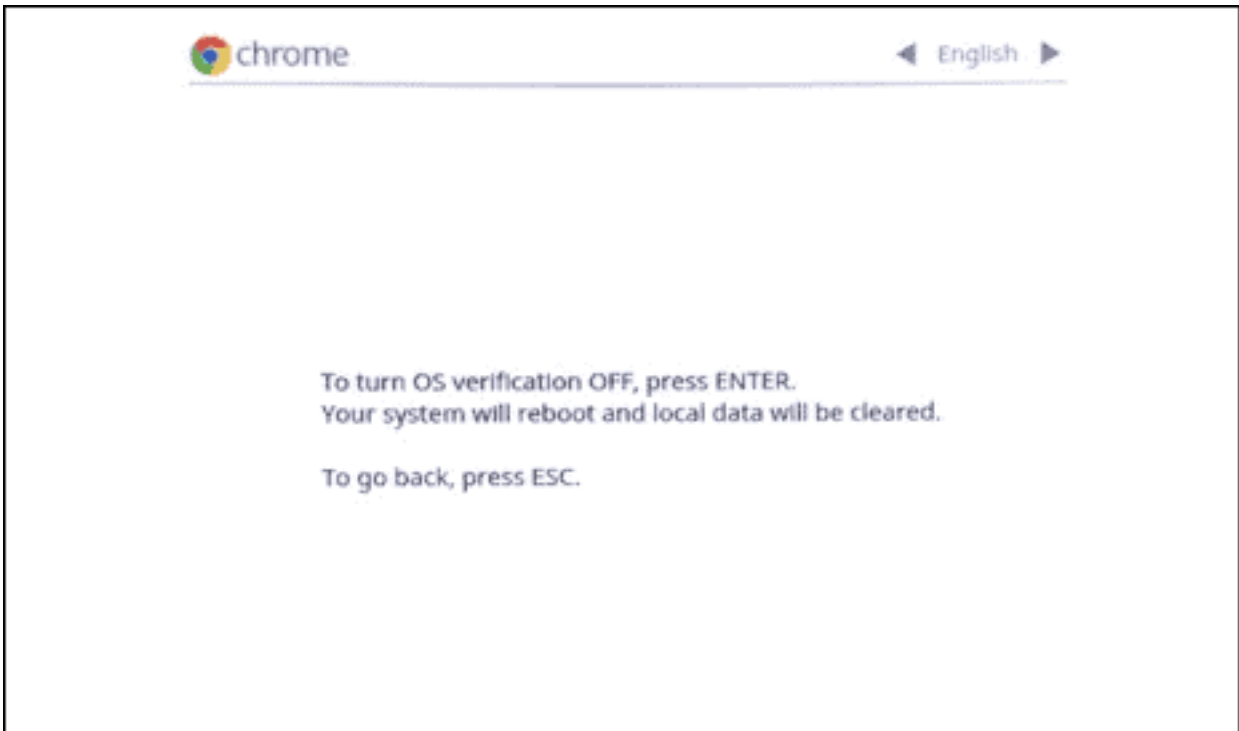

3. The Chromebook will reboot and show the following screen.

4. Press Ctrl + D

5. The Chromebook will then show the following message:
“To turn OS verification off, press Enter...”

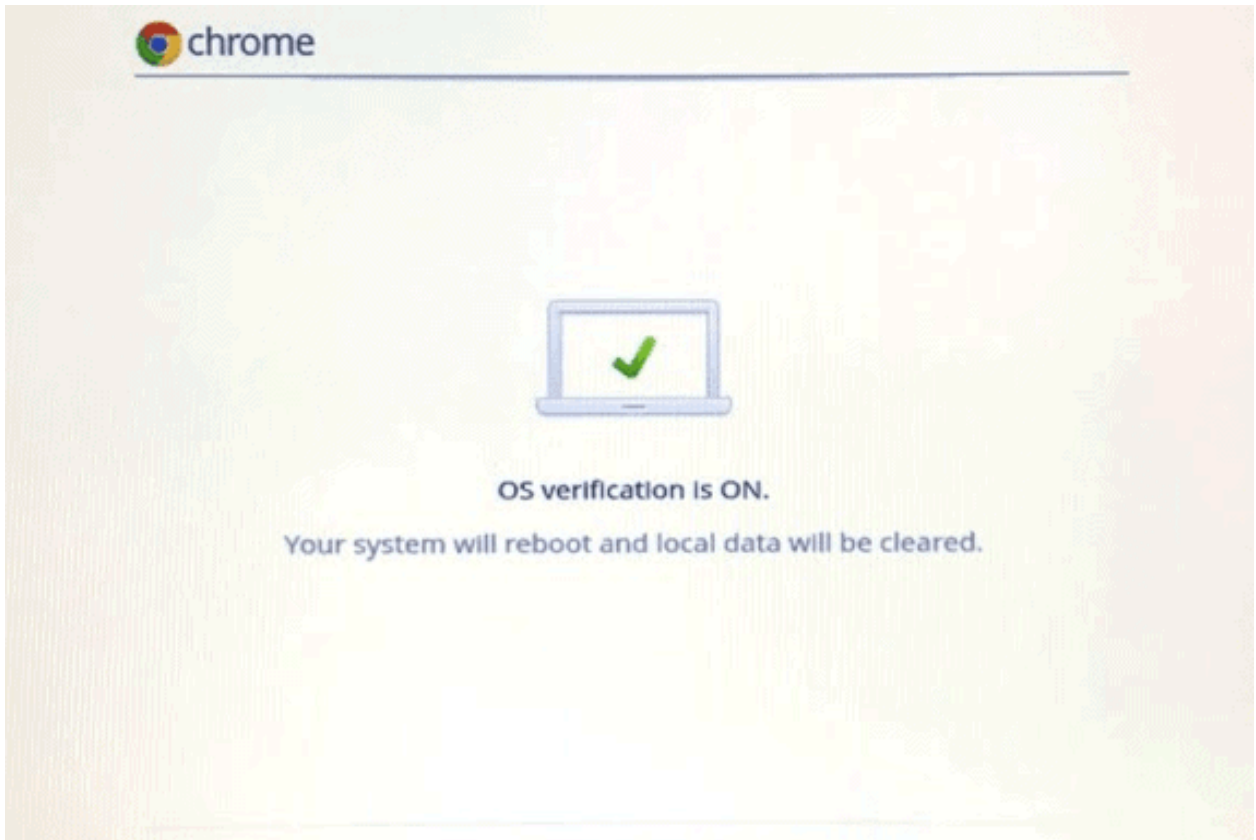

6. Press Enter
7. The Chromebook will reboot to a screen saying OS Verification is turned off.

8. Press the Space Bar
9. Press Enter

10. The Chromebook will show the following screen and reboot.

11. At this point the Chromebook will factory reset and boot back up in Verified (Normal) mode.

12. When the Chromebook boots back up, choose the proper wireless network to connect. In our domain, we force re-enrollment after a reset.
