

Observe the image below. Choose the statement that best describes the image of the continents. \*

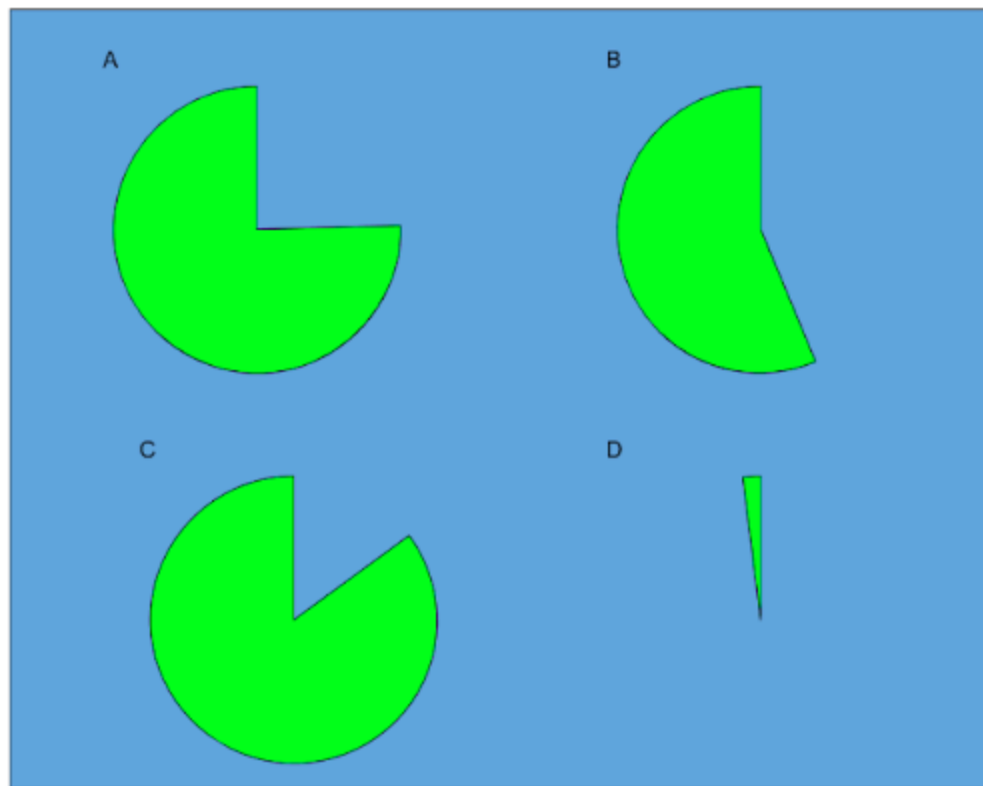

- ☐ Global Climate Change caused Antarctica to be much warmer at some point in history.
- ☐ The states used to be connected.
- ☐ Fossil evidence shows that ancient organisms were once able to travel freely between the continents.
- ☐ The glossopteris once grew in South America and Australia.

What evidence did Alfred Wegener use to support his theory about the movement of the continents? \*

- ☐ The continents seemed to fit together like puzzle pieces.
- ☐ There were similar fossils found on each of the continents.
- ☐ Some mountain ranges begin on one continent and continue on another.
- ☐ All of the above are true.

Observe the image below. Which of the sections best represent the percentage of the earth taken up by the crust? \*

- ☐ A
- ☐ B
- ☐ C
- ☐ D

The movement of the plates is caused by \*

- ☐ continental crust in the mantle.
- ☐ continental drift in the mantle.
- ☐ convection currents in the mantle.
- ☐ sea floor spreading in the mantle.
