

Task 2:

Localize the following video into Kannada/Telugu/Marathi/Odia/Hindi/Tamil/Assamese.

[Finding LCM of three numbers | Real numbers](#): (The entire video is 5:12 minutes, so can localize the whole video.

Details:

This task is to review your conversational tone, and the ability to **localize, speak and write in the localized language**. We always recreate videos with regional language text, so, for the purpose of this task, **please recreate the video (Please don't dub or do voice over)**. Please try to keep in mind the following guidelines:

Guidelines:

1. Your tone and intonations **need not** match the author's tone, but **they need to be conversational**
2. The explanation **should closely match** the English version. All the examples, the flow/narrative, everything should be as close as possible to the English version.
3. You do **NOT need to do word to word** translations. We know that that kills creativity and makes the process boring! Your video will be thoroughly reviewed only to see if they **deliver the same meaning**. Ultimately, that's what matters.
4. In our experience, the localized videos are usually 20-30% longer than the original ones. So, don't worry if your video length stretches a bit. (of course, we don't want the length to be twice the original length as well. So, do try to strike a balance there).
5. Please upload your **video file to google drive** and reply back with the link to it.
