

CLOTH MASK SEWING TUTORIAL

This mask is a modified version of the “Olson Mask” developed by UnityPoint Health hospital in Iowa (<https://www.unitypoint.org/cedarrapids/sewing-surgical-masks.aspx>). The design has been simplified to 4 pieces (rather than 6) and adjusted for overhead-style elastic banding. This design includes a pocket for replaceable filter, metal nose bridge, and over-head elastic banding (top band is one-size, lower band is tied by user).

FILTER (can also be lasercut): https://drive.google.com/open?id=1XFmD1EspryATi0I3iJhUhZiSkdZo6_Ta

List of materials needed:

- 2 X FACE PIECES
- 2 X MOUTH PIECES
- 1 X 32" elastic banding or cord (*<--see last page*)

(If you can't find elastic, I have heard that some people are using non-elastic ties. If all you can find are hair ties, refer to the original Olson mask pattern)

- 1 X 3"-length 22 or 20-gauge copper wire
- 1 X HEPA filter (We use MERV rating 12 or 14)

1 Sew both **FACES** together along the **center** line.

2 On each side, fold the **edge** over $\frac{1}{4}$ " and sew down. Do this for both sides.

3 Sew both **MOUTHS** together along the **center** line.

4 On each side, fold the **edge** over $\frac{1}{4}$ " and sew down. Do this for both sides.

5 Open both **MOUTH & FACE** pieces and lay them over each other with the **raw edges pointed out**.

There are **laser cut dots** on the 'V' of the **FACE** that indicate where to fold both ends inward, overlapping on top of the **MOUTH**.

Pin this set-up in place and sew the **top and bottom perimeter**.

Flip inside out using one of the openings between the **MOUTH** and **FACE**...

The pockets are done!

6 On the **32" elastic band**, mark **7"** from both ends. *(If you have a large head, a 33-34" band may be more comfortable.)*

Sew the elastic bands on the outer edges of the mask leaving the **7" ends** hanging as lower straps to be tied around the neck by the user

7 You can sew in a 3" length of 20 gauge copper wire for the nose bridge. However, the ends may tear the fabric over time. To avoid this, make a 4"-long external sleeve with a non-fraying fabric like felt, ribbon, or non-woven polypropylene (used below). Slide the wire in. You can remove wire when washing the fabric.

8 Place the HEPA filter inside the pocket.. **And finished!**

SEWING IN ELASTIC CORD (IF ELASTIC BANDING IS UNAVAILABLE)
