Title of Manuscript Submitted to Journal of Global Environmental Dynamics (Cambria, 17pt)

Full Name[a1], Full Name[b], and Full Name[c] (12pt)

[a]*Affiliation, Country (8pt)*
[b]*Afilliation, Country*
[c]*Affiliation, Country*

ABSTRACT. The abstract should be clear, concise, descriptive and should provide a brief introduction to the problem. This should generally be followed by a statement regarding the methodology and a brief summary of results. The abstract should end with a comment on the significance of the results or a brief conclusion. Abstracts are written in 8 pt Cambria, preferably not more than 300 words.

Keywords: Provide keywords, at least 5 words (7.5pt)

Article History: Received: xxx; Revised: xxxx; Accepted: xxx; Available online: xxx (7.5pt)
How to Cite This Article: Family name, A.K., Family Name, A.P., and Family name, D. (xxxx) Title of Manuscript. Journal of Global Environmental Dynamics, x(x), xxx-xxx. (7.5pt)

1. Introduction

By using this template will enable you to prepare your manuscript in accordance with the instructions for authors for Journal of Global Environmental Dynamics (JGED) papers with a minimal amount of manual styling and formatting. Font Cambria 9pt.

Where appropriate you should overtype the different fields with your own text. Make sure that as you do this the correct style for the current paragraph is still displayed in the style box on the menu bar. Please read through the following sections for more information on preparing your paper. However, if you use the template you do not have to worry about setting margins, page size, and column size etc. as the template already has the correct dimensions.

The style of citation of references follows "Harvard Reference Format 1 style".

2. Materials and Methods

2.1 Format

Text should be produced within the dimensions shown on these pages. Make use of the maximum stipulated length apart from the following two exceptions: (i) do not begin a new section directly at the bottom of a page, but transfer the heading to the top of the next column; (ii) you may exceed the length of the text area by one line only in order to complete a section of text or a paragraph. You must use 1.0 (single) line spacing and Cambria font. However, when typing complicated mathematical text it is important to increase the space between the text lines in order to prevent sub- and superscript fonts overlapping one another and making your printed matter illegible. If you are using a desktop publishing program ensure that your auto adjust for interline spacing is suitably set to prevent overlapping but without leaving too much space.

2.2 Authors

Author names should be in 12pt Cambria with 12pts above and 8pts below. Author addresses are superscripted by alphabet and centered over both columns of manuscripts. Professional positions/ titles such as Professor, Dr., Production Manager etc., are to be avoided.

3. Table

Tables should have a title which makes the general meaning understandable without reference to the text. Tables should be presented in the form shown in Table 1, with all text, including title Cambria 8pt. Their layout should be consistent throughout.

Horizontal lines should be placed above and below table headings, above the subheadings and at the end of the table above any notes. Vertical lines should be avoided.

If a Table is too long to fit onto one page, the table number and headings should be repeated on the next page before the table is continued. Alternatively, the table can be spread over two consecutive pages (first on even-numbered, then on odd-numbered page).

Table 1
Provide the caption of your legend

Suburb	Energy source (number of respondents; multiple responses allowed		
	Electricity	Wood	Paraffin
Par 1	2	13	8
Par 2	3	17	13
Par 3	1	5	9

Source: Reference (Year)

4. Figure

All illustrations should be clearly displayed by leaving at least a single line of spacing above and below them. When placing a figure at the top of a page, the top of the figure should be at the same level as the first text line of the other column. Legends to illustrations should be centered if on one line or aligned left if on two or more lines and should be Cambria 8pt.

Photographs must always be sharp originals *(not screened versions*) and rich in contrast. A copy or scan of the photograph should be pasted on the page and the original photograph (labelled) should accompany your paper.

Sharp originals (*not transparencies or slides*) should be submitted close to the size expected in the publication. All notations and lettering should be no less than 2 mm high. The use of heavy black, bold lettering should be avoided as this will look unpleasantly dark when printed.

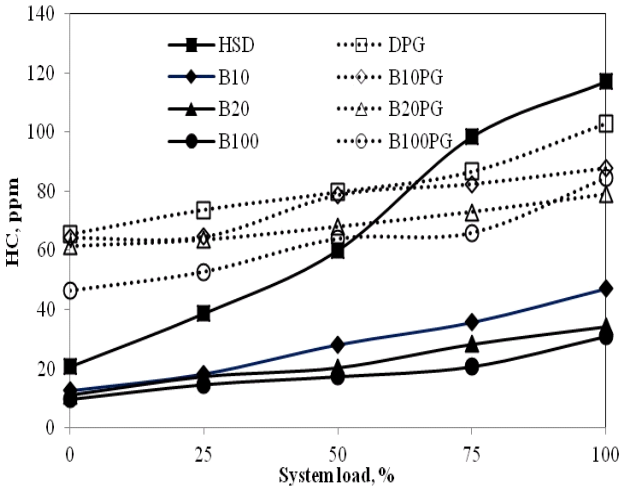

Fig. 1 Provide the caption for your Figures

For Figure must be clear and high resolution with min 300 dpi.

5. Equation

Equations should be placed flush-left with the text margin and should be precede and followed by one line of white.

$$NPV = -I_0 + \sum_{1}^{n} \frac{B-C}{1+r^2} \quad (1)$$

© JGED – ISSN: 2774-7727. All rights reserved

$$t_{PB} = \frac{-In(1-\frac{I_0 r}{CF})}{In(1+r)} \quad (2)$$

$$IRR = r_1 + \frac{(r_2-r_1)(NPV_1)}{NPV_2+NPV_1} \quad (3)$$

where:

- NPV is the net present value,
- t_{PB} is dynamic payback period,
- IRR is the internal rate of return,
- I_0 is the initial investment,
- B represents the benefits in the project life,
- r is the interest rate (assumed to be 10%), and
- C represents the costs.

6. Conclusion

Papers not prepared in accordance with these guide lines and manuscripts with number of mistakes will have to be pre-rejected by Editor. Submission of full-text paper can be done through Online Electronic Submissions Interface at the Journal of Global Environmental Dynamics (JGED). The submission file is in Microsoft Word, NOT in Adobe Acrobat document (pdf file) format.
