Agent Guard is a Chrome extension that lets you limit and approve what AI browser agents can open and pay for. This policy covers the extension only.

1. Data Agent Guard handles

- Your settings: agent rules, allowed and blocked sites, spend caps, and other preferences.
- An activity log: sites an agent visited, blocked, or tried to pay on; payment amounts; your approve or deny decisions; the last 4 digits of a card if the page shows them.
- Page content the extension reads to do its job: payment form fields and totals, and text that looks like hidden instructions to an AI agent. Card numbers you type into a page are not saved by Agent Guard.
- Your approval PIN, stored only as a salted hash.

All of this is stored on your device in the browser's extension storage. It is not sent to us.

2. Optional features that send data

- Chrome sync (off until you turn it on): your settings (never your PIN or keys) are stored in your Google account through Chrome's own sync. Google handles that data under its own policies.

3. What we do not do

We do not sell your data. We do not use it for advertising. We do not use it to decide credit or lending. We do not run analytics. We do not share it with anyone. We do not use or transfer user data except to provide or improve the single purpose of this extension.

4. Security

Data on your device is only as safe as your browser profile and computer. Agent Guard does not protect against malware on your computer.

5. Your choices

You can clear the log and change any setting in the extension's Settings. Removing the extension deletes its stored data from your browser.

6. Children

Agent Guard is not directed to children under 13.

7. Changes

We will post changes on this page and update the date above.
