

- How to Install Kululushippo Outfits

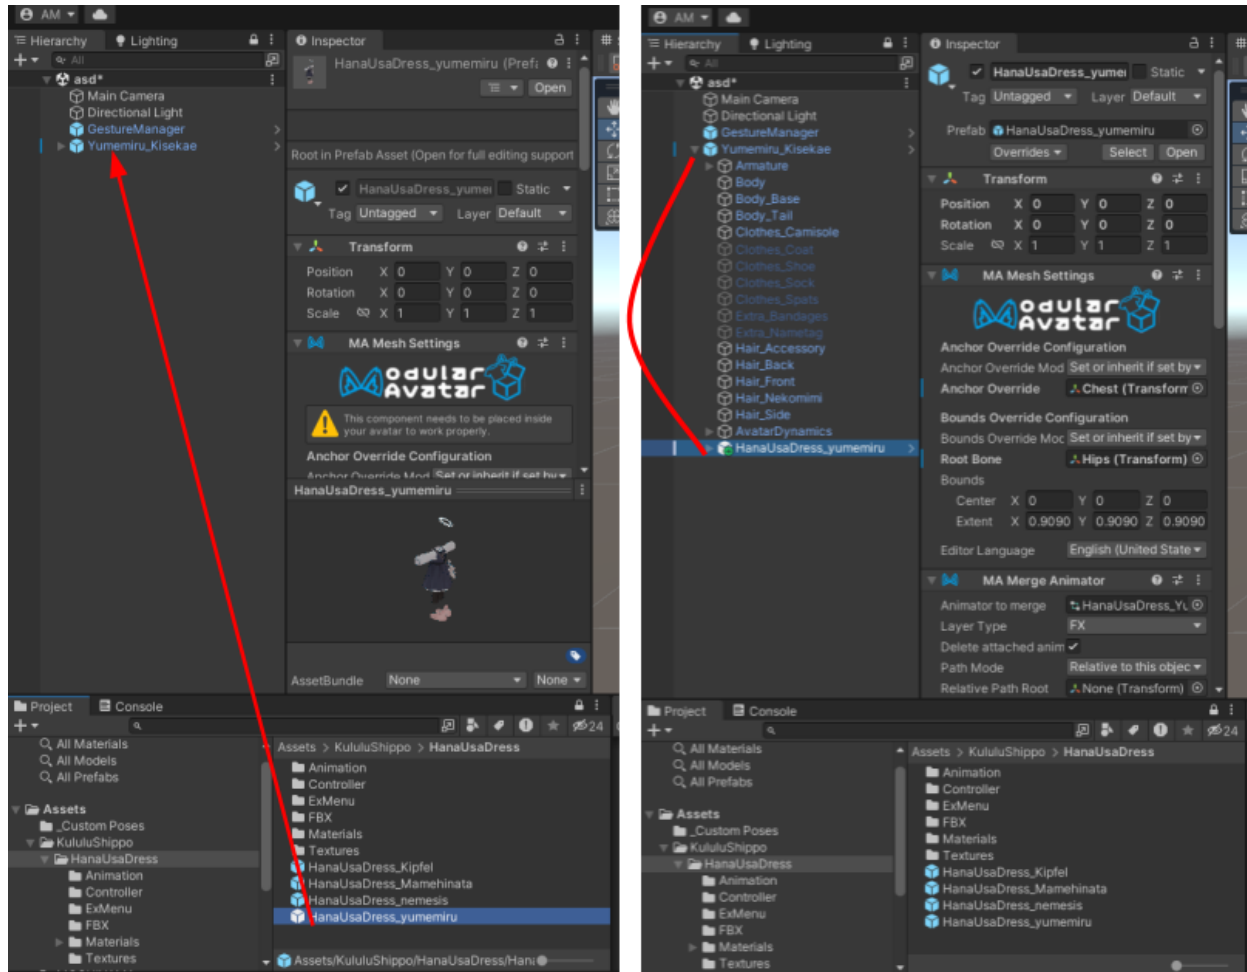

1. Start with your unity project with your avatar is open, (**make sure liltoon and modular avatar is imported**)

2. Double click the unitypackage file you downloaded e.g HanaUsaDress_v1.02.unitypackage and click import

3. Drag and drop the corresponding outfit prefab into your avatar in the hierarchy panel. Because I am using Yumemiru, I use the HanaUsaDress_yumemiru prefab. ***Make sure the outfit prefab is INSIDE the avatar prefab or it will not work**

4. Hide parts of the avatar that are not needed e.g camisole or underwear etc.

5. You can now upload the avatar to VRChat 😊

If there are steps still unclear please message me on booth 😊
