

Privacy Policy for Font X-Ray

Effective date: August 21, 2026

Font X-Ray is a Chrome extension that helps users identify, inspect, and analyze website typography, including fonts, font sizes, font weights, colors, line height, letter spacing, and related CSS typography styles.

Data We Collect

Font X-Ray may process the following information locally in your browser:

- Website text content visible on the active page
- Typography and CSS style information from the active page
- User interactions inside the extension, such as scan actions, selected elements, settings, CSS export actions, and recent scan history
- A locally stored Pro license key, if you choose to enter one

Font X-Ray does not collect personally identifiable information, health information, financial information, payment card details, location data, personal communications, passwords, form inputs, or browsing history.

How We Use Data

Font X-Ray uses page content and typography styles only to provide its core functionality:

- Detect fonts used on a website
- Inspect selected text elements
- Display typography details in the Chrome side panel
- Save recent scan history locally
- Generate local CSS export files when requested by Pro users
- Store user preferences such as auto-scan settings
- Store local Pro activation status

Local Storage

Recent scan history, settings, license key, and license activation status are stored locally in your browser using Chrome extension storage and local storage. This information is not sold or shared with third parties.

Downloads

Font X-Ray uses the downloads permission only when a Pro user chooses to export typography CSS. The extension generates a CSS file locally from scanned typography data and saves it to the user's computer. Font X-Ray does not download remote files, access existing downloads, or collect downloaded content.

Payments and Pro Upgrades

Font X-Ray uses Gumroad as an external checkout provider for Pro upgrades. When you click the upgrade button, you may be redirected to Gumroad. Payment processing is handled by Gumroad and is subject to Gumroad's own privacy policy and terms.

Font X-Ray does not collect or store payment card details.

Data Sharing

Font X-Ray does not sell, rent, or share user data with advertisers, data brokers, or third parties.

Remote Code

Font X-Ray does not use remote code. The extension's JavaScript, CSS, HTML, and core logic are included inside the extension package.

Host Permissions

Font X-Ray requests access to websites so it can inspect typography on pages that users choose to scan. This access is used only to read visible text elements and computed CSS styles for typography inspection.
