

S.L: Carbon Water Filters Are Garbage

Drinking tap water is like drinking straight from a puddle,

Or Worse...

Carbon filters are only designed to catch things like:

- chlorine
- pesticides
- herbicides
- volatile organic compounds

But they never get it all.

Besides there's a longer list of chemicals they Don't get rid of like:

- microorganisms
- chloramine
- fluoride
- heavy metals
- volatile bacteria
- viruses
- hormone disrupting plastic particles

And more

If you have a water filter that's slower than waiting for the wifi to reboot

Then why not have an effective one?

You have two choices

Keep drinking water out of hundred year old rusty city pipes

OR
