## 📅 WooCommerce Integration Community Feedback

Attendees: fpatel@axim.org Maria Fernanda Magallanes Z

### Notes

- The WooCommerce Integration project aims to allow you to sell your open edx courses with WooCommerce.
  - You can create Open edX courses as products in WooCommerce, and when you buy or refund these products, your Open edX platform will reflect these changes.
- Platform requirements
  - Tested from Olive
  - To have all the features, you need palm.3 or Quince
  - Note: the important note here is the version needs to support JWT tokens
- WordPress requirements
  - PHP 8.0 or greater is recommended
    - PHP 8.0 was released in November 2020
  - WordPress 6.3.1
  - WooCommerce plugin.
- Questions
- Pierre: Does this support programs?
  - Mafer: No, we only support course enrollments.
  - Feanil: You can buy a bunch of enrollments.
- Michael: Uses the API for enrollments.
- Michael: Ideas for upgrading the enrollment mode for upselling courses?
  - Right now, the paths in the upsell messages are specific to the ecommerce service. It would be useful if this was more configurable so that you could get people to go to other commerce systems like woocommerce or shopify.
