ABSTRACT

150–200 words. Concisely present the background or problem, objective, method, principal results, and conclusion. Do not include citations, tables, figures, or undefined abbreviations.
Keywords: 3–5 keywords or key phrases representing the main concepts of the article

1. INTRODUCTION

Explain the research context and problem, state of the art, relevant previous studies, research gap, novelty or scientific/practical contribution, and the objective of the study. Avoid an introduction that provides only general background without identifying a clear gap and contribution.

2. RESEARCH METHOD

Describe the research design, location or context where relevant, population/sample/materials, instruments, procedures, variables, data collection, analytical or statistical methods, software used, and relevant technical standards. Provide sufficient detail for appropriate assessment and reasonable replication.

3. RESULTS AND DISCUSSION

Present the results systematically and interpret them scientifically. Compare the findings with relevant literature, theory, or standards, explain implications and limitations, and demonstrate the contribution of the study. Do not merely repeat information already shown in tables or figures.

3.1 Table Example

Table 1. Informative table title

Variable	Value/Parameter	Description
Data 1	Value	Description
Data 2	Value	Description
Data 3	Value	Description

3.2 Figure Example

Insert a figure or diagram with adequate resolution here

Source: provide the source and permission when the figure is not owned by the authors

Figure 1. Informative figure caption

3.3 Equation Example

$$y = a x + b \quad (1)$$

Define all symbols and use SI units consistently.

4. CONCLUSION

Directly answer the research objective and emphasize the main findings and contribution. Avoid repeating the abstract or discussion at length. Where relevant, briefly state implications, limitations, and recommendations for future research.

ACKNOWLEDGMENTS (OPTIONAL)

Acknowledge contributors who do not meet the criteria for authorship. Do not place funding information here when it is already reported in the Funding Statement.

DECLARATIONS

Author Contributions

Required. Example: Conceptualization, A.A. and B.B.; methodology, A.A.; investigation, C.C.; data curation, B.B.; writing - original draft, A.A.; writing - review and editing, all authors; supervision, D.D. Adjust the statement to reflect the actual contributions.

Funding

Required. If there was no external funding, state: "This research received no external funding." If funding was received, identify the funding organization and grant or contract number.

Conflict of Interest

Required. If no conflict exists, state: "The authors declare no conflict of interest." If a conflict exists, disclose it transparently.

Data Availability Statement

Complete this statement according to the study. Example: "The data supporting the findings of this study are available from the corresponding author upon reasonable request." If data are available in a repository, provide a DOI or stable URL. If data cannot be shared for ethical or legal reasons, explain the restriction.

Ethical Approval and Informed Consent

Complete this section when the research involves humans, animals, or sensitive data. State the ethics committee and approval number where relevant. If not applicable, state: "Not applicable." For human research, include an informed-consent statement where required.

Artificial Intelligence (AI) Use Disclosure

A disclosure is required. If no generative AI was used beyond routine language correction, state: "The authors declare that no generative AI or AI-assisted tools were used to generate scientific content, data, analysis, references, or conclusions in this manuscript beyond routine spelling, grammar, language correction, or formatting." If such tools were used, identify the tool, explain its purpose, and confirm that all outputs were verified by the authors.

REFERENCES

Authors are encouraged to consider and cite relevant articles previously published in the Journal of Green Science and Technology (JGST) and/or Jurnal Konstruksi dan Infrastruktur (JKI) when those articles make a genuine scholarly contribution to the manuscript. Citations must be selected solely on the basis of scientific relevance. The journal does not require a minimum number of citations to its own publications or affiliated journals.

Articles published in JKI can be accessed through the JKI journal website <https://jurnal.ugj.ac.id/index.php/Konstruksi>
