Summary

A dedicated individual with a multidisciplinary background spanning product management, web development, and cybersecurity. Experienced in managing the end-to-end Agile product development lifecycle on Linear from translating user requirements into versioned PRDs to structuring traceable backlogs while bridging communication between technical and business teams. Leverages custom AI-assisted workflows to streamline PRD drafting and backlog management. Currently deepening expertise in web penetration testing, with hands-on experience identifying vulnerabilities such as SQL Injection, IDOR, and Path Traversal using Burp Suite and SQLMap. Committed to building digital products that are useful, user-friendly, and secure from the ground up.

Education

Universitas Multimedia Nusantara

August 2022 - Present

Bachelor of Computer Science

- Overall GPA: 3,53/4,0 (Current)

Experience & Projects

Rigo Inovasi Digital

January 2026 - Present

Project Manager

- Led the end-to-end product development lifecycle for Chatrigo, an AI-powered chatbot platform designed to streamline and assist business operations.
- Drove Agile product planning in Linear by defining Initiatives per product version, breaking them down into feature Projects, User Stories, and Issues, and mapping cross-team dependencies through native issue relations (Blocks / Blocked By) to keep the development workflow unblocked.
- Designed and operationalized custom AI-assisted agent workflows to translate user requirements into versioned PRDs with structured ambiguity audits and clarification checkpoints, then convert approved requirements into a fully traceable Linear backlog of Projects, Issues, and code-grounded technical sub-issues.

Moonlay Technologies

January 2025 - June 2025

Product Owner & Frontend Developer Internship

- Designed the system and database architecture (PostgreSQL) from the ground up, creating the Entity Relationship Diagram (ERD) to support complex multi-store analytics and management functionalities.
- Spearheaded the development of "Store Management" and "Store Comparison" features on the Visee retail analytics platform, managing the entire agile lifecycle from the product backlog in Jira to final implementation.
- Developed a responsive UI with TypeScript and React JS, fully integrating it with Golang back-end services and various analytics dashboards to deliver comprehensive business insights.

Radioactive Universitas Multimedia Nusantara

March 2024 - November 2024

Frontend Developer

- Developed responsive and user-friendly login, registration, and password recovery pages to support user access for the Radioactive event.
- Created a registration page for the radio announcing competition with an appealing design and optimized functionality.
- Focused on building a responsive interface across devices and conducted functional testing to ensure peak performance.

Starlight Universitas Multimedia Nusantara

February 2024 - November 2024

Frontend Developer

- Developed and managed the recruitment page for the Starlight event website, an event dedicated to showcasing the talents of UMN students.

- Responsible for creating an online form that allows students to submit their information to join and showcase their talents in the event.
- Collaborated with the creative and technical teams to ensure an aesthetically pleasing and fully functional website that is responsive across devices.

Certificates

Certified Phishing Prevention Specialist (CPPS)
Hack & Fix

December 2025

L1 Web Penetration Testing
Jadi Hacker

November 2025
