

Subject: AI Agents for Manufacturing – Reduce Downtime, Optimize Inventory, Boost ROI

Hi [Customer Name],

Hope you're having a productive week.

I wanted to share a [quick video](#) that speaks directly to challenges manufacturers face today—volatile supply chains, rising operational costs, and the need for real-time decision-making across inventory, production, and maintenance.

To help address these, Google Cloud has partnered with Pluto7 to offer **Planning in a Box with Pi Agent**—an AI-powered platform built on **Google Cloud AI, AgentSpace, and Cortex Framework**, tailored for modern manufacturing.

Most manufacturing systems today are still siloed or heavily manual, making it hard to adapt quickly. Our solution brings agility, intelligence, and precision to your planning operations—like a ride-share app for your supply chain and production planning.

With Pi Agent, manufacturers can:

✓ **Predict Equipment Failures** – Reduce unplanned downtime with AI agents monitoring equipment health.

✓ **Optimize Inventory in Real-Time** – Get accurate visibility into demand and supply, and adjust faster to disruptions like tariff changes or material shortages.

✓ **Improve Product Quality** – Detect defects early and reduce scrap with AI-driven quality control.

✓ **Accelerate ROI** – Customers are seeing projected savings between **\$20M–\$40M annually** (for a \$2B company). Pluto7 can provide refined estimates using your data.

✓ **Go Live Fast** – Get a core use case, like inventory optimization or predictive maintenance, into production in just 2–4 weeks.

Interested? I'd love to set up a demo with a Pluto7 team to show you how this can benefit your business.

Best regards,

[Your Name]
