

Petition to withdraw the UGC draft curriculum 2025 for Mathematics B.Sc./B.A.

We, the undersigned researchers, teachers, and graduate students in mathematics and related disciplines, are deeply concerned by the [UGC draft curriculum for Mathematics, 2025](#). It is riddled with grave defects, and if adopted, will damage the prospects of generations of students. By extension, every endeavor in the country that depends on mathematics (including the sciences, engineering, technology, and economics) will suffer. **We urge the UGC to withdraw this draft and form a new committee consisting of expert mathematicians and teachers of undergraduate mathematics to redraft the curriculum.**

What are the issues with the current draft? We make the case as succinctly as possible. More detailed critiques have been given by many of the signatories in their individual capacities, in the google feedback form provided by the UGC.

- ❖ Topics that should form the bedrock of UG curriculum, such as real analysis, linear algebra, and algebra, are inadequately covered. Algebra is crammed into one semester and real analysis is introduced so late that it does not leave room for natural subsequent courses to be offered.
- ❖ Obsolete courses like *Analytical Geometry* and *Mechanics* (a legacy of the British system of education) take up the space that can otherwise be used to teach more useful and relevant courses.
- ❖ Applied mathematics is short-changed; programming and numerical methods are outside the core. Statistics is stuffed into one course. In courses on statistics, machine learning, artificial intelligence, etc., it is natural and customary to have a practical and application-based component; this opportunity has been squandered.
- ❖ Many elective courses require understanding of topics that have not been taught in basic courses. *Mathematics in Music* claims to require only class-10 mathematics, but the content includes Fourier analysis and Markov chains (which cannot even be taught at that stage). Fundamental concepts of sets, functions,

vector spaces are being taught in *Mathematics for Machine Learning*, which does not do justice either to these concepts, or to machine learning (which has only 15 hours left).

- ❖ Some of the courses on mathematics in other disciplines (e.g., physics, chemistry, life-sciences) have the pitfall that most mathematics teachers do not have the knowledge to teach such courses (e.g., quantum mechanics), and students do not have the background needed to understand such courses. Mathematics in arts subjects (music, drama, arts) have similar problems, only more serious as they are farther from the expertise of most mathematics teachers. Yet other courses, such as *Mathematics in Meditation*, do not belong in a UG mathematics curriculum.
- ❖ The value-added-courses, fourteen of them, which are supposed to prepare the students for the modern workforce (according to the NEP) do no such thing. They are poorly conceived courses in history. Most of these courses have no content beyond high-school mathematics.
- ❖ The inadequacy of the courses is all the more glaring, because a student graduating after 4 years is eligible to write the NET exam and qualify for a Ph.D. The draft curriculum does not prepare a student to pursue an M.Sc., let alone a Ph.D. or a job in industry.
- ❖ Beyond the defects of the course design, there are errors of a startling nature. In multiple courses, the given references do not exist! For example, the books of Rudin (*Mathematics in Physics*), Karlin and Taylor (*Mathematical Psychology*), Glenn Ledder (*Mathematics in Sustainability*), Mirabai Starr (*Mathematics in Meditation*), Myers and Henson (*Mathematical Psychology*). It raises serious questions on how this draft curriculum was prepared.

In this country, we have many excellent mathematicians and outstanding teachers of mathematics. Having benefited from the best education this country provides and being aware of the best practices in the world, they would be more than willing to lend their services. Tapping into this readily available human resource will allow the UGC to design a modern and balanced curriculum that also addresses the specific requirements of the country.

A nation with a long tradition of excellence in mathematics deserves a much better undergraduate curriculum. Hence, we repeat our stance: The UGC should withdraw the proposed draft curriculum and form a new committee of experts in mathematics research and teaching. Our purpose in making this petition is identical to the goals of the UGC: giving future generations of Indian students the best education possible.

DISCLAIMER: The opinions expressed above draw on our experience and expertise in matters related to mathematics. As such it is our individual opinion, not as members of any institution, university or organization we belong to.
